The Tree of Hands Ruth Rendell, 2010-12-28 Edgar Award Finalist. In London, a missing child unites three mothers in grief, madness, and murder. When Benet Archdale was a young girl in North London, her mother Mopsa made her nervous. The woman was unsound and posed ever-present dangers. Yet Benet understood her sickness and forgave her threats. In pursuit of a relatively sane life as a novelist and loving single parent, Benet has since kept Mopsa at a distance. But it's not only the sudden death of Benet's two-year-old son that shakes her safe world. It's the past Mopsa has returned to be at her inconsolable daughter's side. Nurturing, rational, and seemingly cured, Mopsa is going to do everything she can to ease Benet's grief. Then, on the other side of town, the child of a barmaid has gone missing. Authorities fear the search can't end well. As Benet and Mopsa are drawn into the disappearance, the secrets, lies, and desperation of three mothers will converge by chance and by design. For them, it's a crime that is at once a delusion, an escape, and a nightmare. No one surpasses Ruth Rendell when it comes to stories of obsession, instability, and malignant

Making Art Together Mark Cooper, Lisa Sjostrom, 2007-08-01 Artist Mark Cooper aims to change the way you think about making art with kids Working with schools around the country Cooper has brought together scores of teachers and hundreds of children to make remarkable

collaborative art that has enlivened classrooms and public spaces and been displayed in the nation's most prestigious museums. In this inspiring practical idea-filled book, Cooper shows how any teacher, not just art teachers, can imagine and execute similar projects in their own classrooms. But more than that, Cooper transforms our sense of possibilities, arguing for a new view of art in schools. *Making Art Together* is a book about art education structured around big ideas that adults can flourish in the role of Master Artist, that the perspective of contemporary art offers liberating possibilities for rethinking art in schools that art can and should be about the larger world and thus naturally ties in to all areas of the curriculum. Most of all, Cooper shows us the power of collaboration. From mammoth freestanding sculptures to billboards against violence to maps of the world, the projects here are all planned, designed, and completed by children themselves. The resulting artwork is complex and ambitious on a scale that would be out of reach for any individual child. Working collaboratively using a distinctly democratic model, kids actually think and work like adult artists throughout every stage of the project. Together, the sky's the limit; the artistic and educational opportunities are boundless. *Making Art Together* is a bold, beautifully illustrated book that could, at a time when art budgets are being slashed, revitalize our sense of what art in schools can accomplish. Computing: Fundamentals And Applications - Proceedings Of The International Conference Parco99 Erik H D'hollander, Gerhard R Joubert, F J Peters, Henk Sips, 2000-05-31. This millennium will see the increased use of parallel computing technologies at all levels of mainstream computing. Most computer hardware will use these technologies to achieve higher computing speeds, high-speed access to very large distributed databases, and greater flexibility through heterogeneous computing. These developments can be expected to result in the extended use of all types of parallel computers in virtually all areas of human endeavour. Compute-intensive problems in emerging areas such as financial modelling and multimedia systems, in addition to traditional application areas of parallel computing such as scientific computing and simulation, will stimulate the developments. Parallel computing as a field of scientific research and development will move from a niche concentrating on solving compute-intensive scientific and engineering problems to become one of the fundamental computing technologies. This book gives a retrospective view of what has been achieved in the parallel computing field during the past three decades, as well as a prospective view of expected future developments. A
