

Step 1: Determine what operation is needed to solve.	First you need to ask, "What do I know?" The problem states that one batch of cookies needs $\frac{3}{4}$ cup of sugar and the other batch needs $\frac{2}{4}$ cup of sugar. Then you need to ask, "What do I need to find out?" The problem asks, "How much sugar is needed to bake both batches of cookies?" which means the unknown information is the total amount of sugar needed. Using this information, you can conclude that addition is needed to solve the problem.
Step 2: Write an equation.	To solve using addition, you can add the two amounts together. $\frac{3}{4} + \frac{2}{4} = ?$
Step 3: Solve the equation.	To add fractions with the same denominator, add the numerators and keep the denominators the same. $\frac{3}{4} + \frac{2}{4} = \frac{5}{4}$ When solving equations involving fractions, you should always simplify your answer. $\frac{5}{4}$ can be simplified to $1\frac{1}{4}$.
Step 4: State your answer in a sentence.	When solving a word problem, the answer should be stated in a sentence to clearly say what the solution represents in the context of the problem. Natalie will need $1\frac{1}{4}$ cups of sugar to make both batches of cookies.

Situation Problems Involving Systems Tesccc:

Architecture of Systems Problem Solving George J. Klir, Doug Elias, 2012-12-06 One criterion for classifying books is whether they are written for a single purpose or for multiple purposes. This book belongs to the category of multipurpose books but one of its roles is predominant; it is primarily a textbook. As such, it can be used for a variety of courses at the first year graduate or upper division undergraduate level. A common characteristic of these courses is that they cover fundamental systems concepts, major categories of systems problems, and some selected methods for dealing with these problems at a rather general level. A unique feature of the book is that the concepts, problems, and methods are introduced in the context of an architectural formulation of an expert system, referred to as the general systems problem solver or aSPS, whose aim is to provide users of all kinds with computer-based systems knowledge and methodology. The aSPS architecture, which is developed throughout the book, facilitates a framework that is conducive to a coherent, comprehensive, and pragmatic coverage of systems fundamentals, concepts, problems, and methods. A course that covers systems fundamentals is now offered not only in systems science, information science, or systems engineering programs but in many programs in other disciplines as well. Although the level of coverage for systems science or engineering students is surely different from that used for students in other disciplines, this book is designed to serve both of these needs.
