Enterprise Architecture at Work Marc Lankhorst, 2009-07-15 An enterprise architecture tries to describe and control an organisation s structure processes applications systems and techniques in an integrated way The unambiguous specification and description of components and their relationships in such an architecture requires a coherent architecture modelling language Lankhorst and his co authors present such an enterprise modelling language that captures the complexity of architectural domains and their relations and allows the

construction of integrated enterprise architecture models They provide architects with concrete instruments that improve their architectural practice As this is not enough they additionally present techniques and heuristics for communicating with all relevant stakeholders about these architectures Since an architecture model is useful not only for providing insight into the current or future situation but can also be used to evaluate the transition from as is to to be the authors also describe analysis methods for assessing both the qualitative impact of changes to an architecture and the quantitative aspects of architectures such as performance and cost issues The modelling language presented has been proven in practice in many real life case studies and has been adopted by The Open Group as an international standard So this book is an ideal companion for enterprise IT or business architects in industry as well as for computer or management science students studying the field of enterprise architecture

,1987 Automating Systems Development David R. Benyon, Steve Skidmore, 2012-12-06 1 INTRODUCTION These proceedings are the result of a conference on Automating Systems Development held at Leicester Polytechnic England on 14 to 16 April 1987 The conference was attended by over 170 delegates from industry and academia and it represents a comprehensive review of the state of the art of the use of the computer based tools for the analysis design and construction of Information Systems IS Two parallel streams ran throughout the conference The academic or research papers were the fruit of British European and Canadian research with some of the papers reflecting UK Government funded Alvey or European ESPRIT research projects Two important touchstones guided the selection of academic papers Firstly they should be primarily concerned with system rather than program development Secondly they should be easily accessible to delegates and readers We felt that formal mathematical papers had plenty of other opportunities for airing and publication The second stream was the applied programme a set of formal presentations given by leading software vendors and consultancies It is clear that many advances in systems development are actually applied rather than research led Thus it was important for delegates to hear how leading edge companies view the State of the Art This was supported by a small exhibition area where certain vendors demonstrated the software they had introduced in the formal presentation
