IDNet Addressable Manual Callpoint

Operation

Activation of the Simplex callpoint requires the glass element to be broken. Completing the action operates a micro-switch whose condition is reported back to the control panel.

Callpoint reset requires the use of a special key (supplied with the callpoint) to restore the front cover which allows the glass element to be replaced.

Callpoint testing is performed by inserting the key fully into the bottom of the housing and pulling down, this releases the bottom of the housing and breaks glass element. To reset the callpoint, the bottom of the housing is pushed upwards until it locks in position. (See illustration below.)
