CMOS Processors and Memories Krzysztof Iniewski, 2010-08-09

CMOS Processors and Memories addresses the state of the art in integrated circuit design in the context of emerging computing systems. New design opportunities in memories and processors are discussed. Emerging materials that can take system performance beyond standard CMOS, like carbon nanotubes, graphene, ferroelectrics, and tunnel junctions, are explored. CMOS Processors and Memories is divided into two parts: processors and memories. In the first part, we start with high-performance, low-power processor design, followed by a chapter on multi-core processing. They both represent state-of-the-art concepts in current computing industry. The third chapter deals with asynchronous design, which still carries lots of promise for future computing needs. At the end, we present a hardware design space exploration methodology for implementing and analyzing the hardware for the Bayesian inference framework. This particular

methodology involves analyzing the computational cost and exploring candidate hardware components proposing various custom architectures using both traditional CMOS and hybrid nanotechnology CMOL The first part concludes with hybrid CMOS Nano architectures The second memory part covers state of the art SRAM DRAM and flash memories as well as emerging device concepts Semiconductor memory is a good example of the full custom design that applies various analog and logic circuits to utilize the memory cell s device physics Critical physical effects that include tunneling hot electron injection charge trapping Flash memory are discussed in detail Emerging memories like FRAM PRAM and ReRAM that depend on magnetization electron spin alignment ferroelectric effect built in potential well quantum effects and thermal melting are also described CMOS Processors and Memories is a must for anyone serious about circuit design for future computing technologies The book is written by top notch international experts in industry and academia It can be used in graduate course curriculum
