Operating Systems Programming Stephen J. Hartley,1995 Operating Systems Programming is designed to give students experience writing programs in a concurrent programming language Specifically it shows how to use the SR concurrent programming language to write programs that use semaphores monitors message passing remote procedure calls and the rendezvous for an operating systems course The language can also be used for parallel computing in a shared memory multiprocessor or a distributed memory cluster environment The pedagogical orientation of the text helps students understand concepts more clearly it describes the SR language presents some examples of SR programs and provides numerous programming assignments in the form of open student laboratories Operating Systems Programming is ideal for undergraduate and graduate students enrolled in concurrent programming and operating systems courses

Introduction to the Formal Design of Real-Time Systems David F. Gray,2012-12-06 but when we state that A equals B as well having to know what we mean by A and B we also have know what we mean by equals This section explores the role of observers how different types of observer see different things as being equal and how we can produce algorithms to decide on such equalities It also explores how we go about writing specifications to which we may compare our SCCS designs The final section is the one which the students like best Once enough of SCCS is grasped to decide upon the component parts of a design the turning the handle steps of composition and checking that the design meets its specification are both error prone and tedious This section introduces the concurrency work bench which shoulders most of the burden How you use the book is up to you I'm not even going to suggest pathways Individual readers know what knowledge they seek and course leaders know which concepts they are trying to impart and in what order

Information Security Javier Lopez,Chris J. Mitchell,2015-08-27 This book constitutes the refereed proceedings of the 18th International Conference on Information Security ISC 2015 held in Trondheim Norway in September 2015 The 30 revised full papers presented were carefully reviewed and selected from 103 submissions The papers cover a wide range of topics in the area of cryptography and cryptanalysis and are organized in the following topical sections signatures system and software security block ciphers protocols network and cloud security encryption and fundamentals PUFs and implementation security and key generation biometrics and image security

Nonsequential and Distributed Programming with Go Christian Maurer,2025-08-02 After a short chapter on basic aspects of software engineering and its realization in Go this book introduces to nonsequential and distributed programming with Go It systematically presents basic concepts for the synchronization and communication of

concurrent processes These include locks semaphores fairness and deadlocks monitors local and network wide message passing networks as graphs network exploration distributed depth and breadth first search and the selection of a leader in networks In order to make readers familiar with the concepts the author always takes up the same classic examples This makes learning easier because the concepts presented can be compared more easily with the language resources The algorithms are formulated in the Go programming language which can be used to express numerous synchronization concepts Due to its simple syntax Go also offers the advantage that readers without prior knowledge can follow the basic concepts The chapters on locks semaphores monitors and network wide message passing also present some basic approaches to programming in C and Java All source texts are available online Besides a number of error corrections and smaller updates in this second edition the nanouniverse nU is replaced with the microuniverse U This allows for beautiful animations in many places which are not possible with the nanouniverse due to a lack of the necessary support for inputs and outputs e g in the chapters on fairness messages farMonitors traversals and election
