Boghossian,2014-07-01 For thousands of years the faithful have honed proselytizing strategies and talked people into believing the truth of one holy book or another Indeed the faithful often view converting others as an obligation of their faith and are trained from an early age to spread their unique brand of religion The result is a world broken in large part by unquestioned faith As an urgently needed counter to this tried and true tradition of religious evangelism *A Manual for Creating Atheists* offers the first ever guide not for talking people into faith but for talking them out of it Peter Boghossian draws on the tools he has developed and used for more than 20 years as a philosopher and educator to teach how to engage the faithful in conversations that will help them value reason and rationality cast doubt on their religious beliefs mistrust their faith abandon superstition and irrationality and ultimately embrace reason **Multidatabase Systems** A. Distributed Multimedia Systems and Telecommunication Services Hans Scholten, Marten J. van Sinderen, 2003-07-31

The first International Workshop on Interactive Distributed Multimedia Systems and Telecommunication Services IDMS was organized by Prof K Rothermel and Prof W Effelsberg and took place in Stuttgart in 1992. It had the form of a national forum for discussion on multimedia issues related to communications. The succeeding event was attached as a workshop to the German Computer Science Conference GI Jahrestagung in 1994 in Hamburg organized by Prof W Lamersdorf. The chairs of the third IDMS E Moeller and B Butscher enhanced the event to become a very successful international meeting in Berlin in March 1996. This short overview on the first three IDMS events is taken from the preface of the IDMS 97 proceedings published by Springer as Lecture Notes in Computer Science Volume 1309 written by Ralf Steinmetz and Lars Wolf. Both Ralf Steinmetz as general chair and Lars Wolf as program chair of IDMS 97 organized an excellent international IDMS in Darmstadt. Since 1998 IDMS has moved from Germany to other European cities to emphasize the international character it had gained in the previous years. IDMS 98 was organized in Oslo by Vera Goebel and Thomas Plagemann at UniK Center for Technology at Kjeller University of Oslo. Michel Diaz Phillipe Owezarski and Patrick S nac successfully organized the sixth IDMS event again outside Germany. IDMS 99 took place in Toulouse at ENSICA. IDMS 2000 continued the tradition and was hosted in Enschede the Netherlands.

Nikos Mastorakis, Valeri Mladenov, Vassiliki T. Kontargyri, 2010-03-25 Software testing has been considered so important that organizations can assign teams only for testing activities Testing is an important activity to ensure software quality Tests are usually run several times to certify that code maintenance did not accidentally insert defects into working parts of the software In such situations test teams shall be able to estimate the required effort to execute test cases in its schedules and to request more resources or negotiate deadlines when necessary When regarding model based testing approaches that we use in our documented Integrated and Optimized Software Testing methodology IOSTP 1.4 a high number of test cases can be automatically generated As team resources are limited it may be not practical to execute all generated test cases Their complexity usually determines the effort required to execute them and it can be used for planning test resources and test suites Several software development estimation models have been proposed over the years However these models do not estimate the effort for executing a given test suite since their estimations are based on software development complexity instead of its test planning test case design and test execution complexity According to our reading of the literature e.g. 5-14 best practices in model based effort estimation include Local calibration or LC i.e. using local data to set two special tuning parameters Stratification i.e. given a database of past projects and a current project to be estimated restrict local calibration to just those records from similar projects **Embedded Systems Handbook**
