Cairney, 2012-12-06 Chemically contaminated land has only recently been recognized as an immediate or long term potential hazard and published guidance on how to tackle such land has been sparse Indeed much of the available technical work emphasizes the risks and dangers rather than indicating safe and economical strategies of reclamation This book provides a comprehensive treatment of the important aspects of land reclamation Its basic aim is to dispel the myths that have become associated with the subject and to indicate methods and strategies that can be used for safe and economical reclamation The authors concentrate on the more important facets of reclamation and indicate where advice and information is more or less certain As in any newly developed field there are still uncertainties and for this reason not all the chapters contain equivalent amounts of detail All the authors have expertise in the field of land reclamation and differences in emphasis between authors reflect the present state of the subject Overall the book emphasizes that contaminated land can be reclaimed safely provided that sufficient attention is paid to detail and that the proposed end use of the land is appropriate and based on a detailed knowledge of the site **Advancing Environmental Justice Through Community-based Participatory Research**, 2002 **Early Forestry Research** Ivan Doig, 1976 **The Struggle for a Human Future** Jeremy Naydler, 2020-04-16 With its wireless networks encompassing the globe the Digital Revolution is altering the very fabric of our lives with alarming rapidity New technologies are bringing about an ever closer union between human beings and machines whilst at the same time transforming our planet into an increasingly hybrid cyber physical world The current rollout of fifth generation wireless communication networks or 5G is central to the project to create a global electronic ecosystem in which we will be obliged to live This will provide the basis for an all pervasive Internet of Things and the widespread integration of Augmented and Virtual Reality into human experience But what genuine human needs will this serve Does the planet really need to be made smart Will our health and that of other living creatures really be unaffected by exposure to escalating levels of electromagnetic radiation As we enter a new era of extreme technology driven by a momentum that seems beyond the constraint of any spiritual or moral consideration both human beings and nature face an unprecedented challenge Jeremy Naydler argues that it is a challenge that can only be met through a re affirmation of essential human values and the recovery of a sacred view of nature From this grounding we can work towards a truly human future that rather than creating yet more pollution and toxicity will bring blessing to the natural world to which we belong Jeremy Naydler has become in my judgement one of the most interesting and original living writers in Britain Professor Bruce G Charlton author of Addicted to Distraction Fake Science Austin Ruse, 2017-07-17 If you listen to any political argument you re eventually bound to hear something like The science is settled on this Or Just look at the
