Automating with SIMATIC S7-1500 Hans Berger, 2014-07-07 With many innovations the SIMATIC S7 1500 programmable logic controller PLC sets new standards in productivity and efficiency in control technology. By its outstanding system performance and with PROFINET as the standard interface it ensures extremely short system response times and the highest control quality with a maximum of flexibility for most demanding automation tasks. The engineering software STEP 7 Professional operates inside TIA Portal a user interface that is designed for intuitive operation. Functionality includes all aspects of Automation from the configuration of the controllers via the programming in the IEC languages LAD, FBD, STL and SCL up to the program test. In the book the hardware components of the automation system S7 1500 are presented including the description of their configuration and parameterization. A comprehensive introduction into STEP 7 Professional illustrates the basics of programming and troubleshooting. Beginners learn the basics of automation with Simatic S7 1500 and users who will switch from S7 300 and S7 400 receive the necessary knowledge.

Automating with PROFINET Raimond Pigan, Mark Metter, 2015-10-29 PROFINET is the first integrated Industrial Ethernet Standard for automation and utilizes the advantages of Ethernet and TCP/IP for open communication from the corporate management level to the process itself. PROFINET CBA divides distributed complex applications into autonomous units of manageable size. Existing fieldbuses such as PROFIBUS and AS Interface can be integrated using so called proxies. This permits separate and cross vendor development, testing and commissioning of individual plant sections prior to the integration of the solution as a whole. PROFINET IO with its particularly fast real time communication fulfills all demands currently placed on the transmission of process data and enables easy integration of existing fieldbus systems. Isochronous real time IRT is used for isochronous communication in motion control applications. PROFINET depends on established IT standards for network management and teleservice. Particular to automation control engineering it offers a special security concept. Special industrial network technology consisting of active network components, cables and connection systems together with recommendations for installation complete the concept. This book serves as an introduction to PROFINET technology. Configuring engineers, commissioning engineers and technicians are given an overview of the concept and the fundamentals they need to solve PROFINET based automation tasks. Technical relationships and practical applications are described using SIMATIC products as example.
