The Car Hacker's Handbook Craig Smith, 2016-03-01 Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open-source hacking tools such as Metasploit, Wireshark, Kayak, canutils, and ChipWhisperer, The Car Hacker's Handbook will show you how to: Build an accurate threat model for your vehicle; Reverse engineer the CAN bus to fake engine signals; Exploit vulnerabilities in diagnostic and data logging systems; Hack the ECU and other firmware and embedded systems; Feed exploits through infotainment and vehicle-to-vehicle communication systems; Override factory settings with performance tuning techniques; Build physical and virtual test benches to try out exploits safely. If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.

In the Bubble John Thackara, 2006-02-17 How to design a world in which we rely less on stuff and more on people. We're filling up the world with technology and devices, but we've lost sight of an important question: What is this stuff for? What value does it add to our lives? So asks author John Thackara in his new book, *In the Bubble: Designing for a Complex World*. These are tough questions for the pushers of technology to answer. Our economic system is centered on technology, so it would be no small matter if tech ceased to be an end in itself in our daily lives. Technology is not going to go away, but the time to discuss the end it will serve is before we deploy it, not after. We need to ask what purpose will be served by the broadband communications, smart materials, wearable computing, and connected appliances that we're unleashing upon the world. We need to ask what impact all this stuff will have on our daily lives. Who will look after it, and how? *In the Bubble* is about a world based less on stuff and more on people. Thackara describes a transformation that is taking place now, not in a remote science-fiction future. It's not about the schlock of the new, but about radical innovation already emerging in daily life. We are regaining respect for what people can do that technology can't. *In the Bubble* describes services designed to help people carry out daily activities in new ways. Many of these services involve technology ranging from body implants to wide-bodied jets. But objects and systems play a supporting role in a people-centered world. The design focus is on services.
