Kouzaev,2024-12-31 This book addresses microwave researchers engineers and Master s and Ph D students It follows the idea of the first Edition to educate the readers on fundamental electromagnetics and show how this brilliant theory is used in developing modern multi physics microwave and terahertz hardware The first three chapters discuss the main ideas and methods of electromagnetism explained in a manner that is clear for readers who have had some initial knowledge of electromagnetism Chapters 4 and 5 are on transmission lines The first text is on the integrated ones for digital applications which have been working since DC up to several tens or hundreds of gigahertz The next chapter is on the waveguides for terahertz frequencies In this book the space modulated signals application compared to the 1st Edition is considered using the example of a novel predicate variable logic processor designed and verified in an FPGA environment Chapter 6 This idea born initially in microwaves allowed an eight logic style re configurable on the fly processor Chapters 7 9 discuss microwaves in heating liquids and the initiation of rapid chemical reactions in novel miniature quasi TEM wave reactors Chapter 10 involves results on trapping and transporting ultra cold matter using combined techniques The new results described here are on numerical simulation of trapping of ultra cold atoms in random 3D optical potentials using the Anderson effect In conclusion the author hopes this book will strengthen the young generation s interest in microwave field theory He believes that advanced electromagnetism combined with other physics branches will play a crucial role in developing new improved components and systems and this book is a stepping stone example in that journey *Laser - Surface Interactions* Rashid A. Ganeev,2013-10-17 This book is about the interaction of laser radiation with various surfaces at variable parameters of radiation As a basic principle of classification we chose the energetic or intensity level of interaction of laser radiation with the surfaces These two characteristics of laser radiation are the most important

parameters defining entire spectrum of the processes occurring on the surfaces during interaction with electromagnetic waves This is a first book containing a whole spectrum of the laser surface interactions distinguished by the ranges of used laser intensity It combines the surface response starting from extremely weak laser intensities 1 W cm^{-2} up to the relativistic intensities $10^{20} \text{ W cm}^{-2}$ and higher The book provides the basic information about lasers and acquaints the reader with both common applications of laser surface interactions laser related printers scanners barcode readers discs material processing military holography medicine etc and unusual uses of the processes on the surfaces under the action of lasers art conservation rangefinders and velocimeters space and earth explorations surface engineering and ablation and others The scientific applications of laser surfaces interactions surface optical nonlinearities surface enhanced Raman spectroscopy surface nanostructuring nanoripples and clusters formation X ray lasers and harmonic generation from the surfaces are discussed from the point of view of the close relations between the properties of surface and matter which is a cornerstone of most of studies of materials The novelty of the approach developed in Laser Surface Interactions is related with the interconnection of scientific studies with numerous applications of the laser surface interactions separated in different chapters by the ranges of laser intensities We present most recent achievements in this field The book provides valuable information for different ranges of reader s preparedness to the laser related topics from unprepared readers to students engineers and researchers professionals and academics
