The Handbook of Lithium-Ion Battery Pack Design John T. Warner, 2015-05-23 The Handbook of Lithium Ion Battery Pack Design Chemistry Components Types and Terminology offers to the reader a clear and concise explanation of how Li ion batteries are designed from the perspective of a manager sales person product manager or entry level engineer who is not already an expert in Li ion battery design It will offer a layman s explanation of the history of vehicle electrification what the various terminology means and how to do some simple calculations that can be used in determining basic battery sizing capacity voltage and energy By the end of this book the reader has a solid understanding of all of the terminology around Li ion batteries and is able to do some simple battery calculations The book is immensely useful to beginning and experienced engineer alike who are moving into the battery field Li ion batteries are one of the most unique systems in automobiles today in that they combine multiple engineering disciplines yet most engineering programs focus on only a single engineering field This book provides you with a reference to the history terminology and design criteria needed to understand the Li ion battery and to successfully lay out a new battery concept Whether you are an electrical engineer a mechanical engineer or a chemist this book helps you better appreciate the

inter relationships between the various battery engineering fields that are required to understand the battery as an Energy Storage System Offers an easy explanation of battery terminology and enables better understanding of batteries their components and the market place Demonstrates simple battery scaling calculations in an easy to understand description of the formulas Describes clearly the various components of a Li ion battery and their importance Explains the differences between various Li ion cell types and chemistries and enables the determination which chemistry and cell type is appropriate for which application Outlines the differences between battery types e g power vs energy battery Presents graphically different vehicle configurations BEV PHEV HEV Includes brief history of vehicle electrification and its future *Lithium-Ion Cells* Yuriy Koshtyal ,Alexander Rumyantsev,2024-12-24 A large quantity of articles and books have been published on the designated topics However most of the literary sources describe the results of scientific articles on the synthesis and study of perspective materials reveal circuit and design solutions for constructing control systems and manufacturing batteries and are educational materials At the same time a small part of the published sources includes the following descriptions of materials produced industrially and used in the LIC manufacturing process demonstrations of the industrially produced LIC energy and power parameters analysis of the characteristics of manufactured miniature lithium ion cells solid state LICs lithium metal cells and all solid state cells as well as others Considering the popularity of the discussed topics one can hope to find detailed information on the Internet Indeed modern search engines make it possible to locate a sufficiently large number of relevant documents However while conducting such research we encountered the following challenges the data are somewhat fragmented and their systematization and structuring are required search results do not always meet search queries For instance data that were relevant to the topic were found but they did not match the query as accumulated data grow the search time for new information extends the choice of search engine and location different countries affects search results the data are not indexed in search engines although the correct keywords and website were requested the information disappears due to website updates and the found data require additional processing For example many presentations show changes in the shape of the discharge curves depending on the discharge current strength In addition however Ragone plots are necessary for a correct comparison and therefore the mathematical processing of presented results is required Thus this book was written to systematize and structure information on industrially produced materials for LIC manufacturing and industrially produced and promising LICs and lithium metal rechargeable cells for various applications **Collision Course** Hans Greimel,William Sposato,2021-06-22 Named one of the Best Business Books of 2021 by The Wall Street Journal In Japan it s called the Ghosn Shock the stunning arrest of Carlos Ghosn the jet setting CEO who saved Nissan and made it part of a global automotive empire Even more shocking was his daring escape from Japan packed into a box and put on a private jet to Lebanon after months spent in a Japanese detention center subsisting on rice gruel This is the saga of what led to the Ghosn Shock and what was left in its wake Ghosn spent two decades building a colossal

partnership between Nissan and Renault that looked like a new model for a global business but the alliance's shiny image fronted an unsteady tense operation. Culture clashes, infighting among executives and engineers, dueling corporate traditions and government maneuvering constantly threatened the venture. Journalists Hans Greimel and William Sposato have followed the story up close with access to key players including Ghosn himself. Veteran Tokyo-based reporters they have witnessed the end of Japan's bubble economy and attempts at opening Japan Inc to the world. They've seen the fraying of keiretsu, Japan's traditional skein of business relationships and covered numerous corporate scandals of which the Ghosn Shock and Ghosn's subsequent escape stand above all. Expertly reported, *Collision Course* explores the complex suspicions around what and who was really responsible for Ghosn's ouster and why one of the top executives in the world would risk everything to escape the country. It explains how economics, history, national interests, cultural politics and hubris collided, crumpling the legacy of arguably the most important foreign businessman ever to set foot in Japan. This gripping, unforgettable narrative full of fascinating characters serves as part cautionary tale, part object lesson and part forewarning of the increasing complexity of doing global business in a nationalistic world.

ELECTRIMACS 2022 Serge Pierfederici, Jean-Philippe Martin, 2024-05-28
This book collects a selection of papers presented at ELECTRIMACS 2022, the 14th international conference of the IMACS TC1 Committee held in Nancy, France, on 17th-21st May 2022. The conference papers deal with modelling, simulation, analysis, control, power management, design, optimization, identification and diagnostics in electrical power engineering. The main application fields include electric machines and electromagnetic devices, power electronics, transportation systems, smart grids, electric and hybrid vehicles, renewable energy systems, energy storage, batteries, supercapacitors and fuel cells, and wireless power transfer. The contributions included in Volume 2 are particularly focused on methodological aspects, modelling and applied mathematics in the field of electrical engineering.

History of Electric Cars Nigel Burton, 2013-06-30
One hundred years ago, electric cars were the most popular automobiles in the world. In the late nineteenth century and at the start of the twentieth century, they outsold every other type of car. And yet, within a couple of decades of the start of the twentieth century, the electric car had vanished. Thousands of battery-powered cars disappeared from the streets, replaced by the internal combustion engine, and their place in the history of the automobile was quietly erased. A century later, electric cars are making a comeback. Fears over pollution and global warming have forced manufacturers to reconsider the electric concept. *A History of Electric Cars* presents for the first time the full story of electric cars and their hybrid cousins. It examines how and why electric cars failed the first time and why today's car manufacturers must learn the lessons of the past if they are to avoid repeating previous mistakes all over again. The book examines in detail early vehicles such as the Lohner-Porsche petrol-electric hybrid of 1901. Key figures in the history of the electric car development, such as Henry Ford, Sir Clive Sinclair's plans to build a number of electric vehicles designed to sit alongside the Sinclair C5. The return of the electric technology to vehicles as diverse as the NASA Lunar Rover, commuting vehicles and supercars. Future developments in

electric cars For the first time the full story of electric cars and their hybrids are examined The hidden past of the electric automobile is uncovered and its future developments are discussed Superbly illustrated with 300 colour photographs many of which are rare and original sketch designs Nigel Burton has written and lectured on cars and automotive history for more than twenty years
