Flat Panel Display Manufacturing Jun Souk, Shinji Morozumi, Fang-Chen Luo, Ion Bitu, 2018-09-24 An extensive introduction to the engineering and manufacture of current and next generation flat panel displays This book provides a broad overview of the manufacturing of flat panel displays with a particular emphasis on the display systems at the forefront of the current mobile device revolution It is structured to cover a broad spectrum of topics within the unifying theme of display systems manufacturing An important theme of this book is treating displays as systems which expands the scope beyond the technologies and manufacturing of traditional display panels LCD and OLED to also include key components for mobile device applications such as flexible OLED thin LCD backlights as well as the manufacturing of display module assemblies Flat Panel Display Manufacturing fills an important gap in the current book literature describing the state of the art in display manufacturing for today's displays and looks to create a reference the development of next generation displays The editorial team brings a broad and deep perspective on flat panel display manufacturing with a global view spanning decades of experience at leading institutions in Japan Korea Taiwan and the USA and including direct pioneering contributions to the development of displays The book includes a total of 24 chapters contributed by experts at leading manufacturing institutions from the global FPD industry in Korea Japan Taiwan Germany Israel and USA Provides an overview of the evolution of display technologies and manufacturing Treats display products as systems with manifold applications expanding the scope beyond traditional display panel manufacturing to key components for mobile devices and TV applications Provides a detailed overview of LCD manufacturing including panel architectures process flows and module manufacturing Provides a detailed overview of OLED manufacturing for both mobile and TV applications including a chapter dedicated to the young field of flexible OLED manufacturing Provides a detailed overview of the key unit processes and corresponding manufacturing equipment including manufacturing test repair of TFT array panels as well as display module inspection repair Introduces key topics in display manufacturing science and engineering including productivity quality factory architectures and green manufacturing Flat Panel Display Manufacturing will appeal to professionals and engineers in R D departments for display related technology development as well as to graduates and Ph D students specializing in LCD OLED other flat panel displays

Liquid Crystal Flat Panel Displays William C. O'Mara, 2013-11-11 We live in the silicon age and the quintessential item that defines our world is the computer Silicon chips power the computer as well as many other products for work and leisure such as calculators radios and televisions In the forty years since the transistor was invented the solid state revolution has affected the lives of almost everyone in the world Based on silicon solid state devices and integrated circuits have revolutionized electronics data processing communications and the like The computer especially the personal computer would be impossible without silicon devices Only one computer was ever built using vacuum tubes and the tubes had to be constantly replaced because they generated too much heat and burned out Silicon devices allowed

for reliable switching operations in arrays of hundreds and thousands of discrete devices As a result the very substantial industrial base that existed for producing vacuum tubes disappeared with one exception That exception is of course the CRT which is evident in televisions computer displays and a host of other information display terminals Until recently there was nothing that could take its place and it seemed that the CRT would remain as the electronic medium for all except the simplest displays The CRT is about to go the way of the other vacuum tubes It s dead but doesn t know it yet
