The 1minute Movie Method

The 1minute Movie Method:

The 15-Minute Movie Method Wallace Evan Wang, 2013-11 If you've always wanted to write a screenplay or a novel you may be wondering What makes a great story It's not just interesting characters memorable dialogue or explosive action scenes What makes a great screenplay or novel is a great story Every great story from classic novels and stage plays to today's modern films follow the same basic proven story structure that alternates between contrasting problems and solutions to maintain and maximize suspense In the traditional three Act structure a story looks like this Act I Exposition Act II Rising Action Act III Climax Act I and Act III are roughly the same length corresponding to a 30 minute length in a 120 minute screenplay but Act II is typically twice as long as either Act I or Act III The result is that the traditional three Act structure sets you up for failure by forcing you to write a huge chunk of your story without any guidelines whatsoever In contrast a four Act structure makes each Act manageable while also providing the necessary contrast to create a compelling story Stories are interesting and suspenseful because they alternate between problems facing the hero followed by solutions that the hero achieves In the four Act structure a story looks like this Act I Exposition Act IIa Positive Rising Action Act IIb Negative Rising Action Act III Climax Another way to look at this four part story structure is as follows Act I Problem facing the hero Act IIa Hero solves the problem and appears to achieve success Act IIb New problems occur Act III Hero finally solves the problem Let's look at how this four part story structure works in Star Wars Act I Problem Luke is stuck in a dead end life on his uncle's farm Act IIa Solution Luke leaves with Obi wan to deliver the stolen Death Star plans Act IIb Problem Luke gets trapped on the Death Star Act III Solution Luke blows up the Death Star The four Act structure clearly lets you tell a story with alternating problems and solutions which is how you generate suspense to keep an audience glued to the edge of their seats Notice that with Act IIa the action continues to rise but in a positive direction Yet in Act IIb the action also continues to rise but in a negative direction This subtle difference is what the typical three Act structure fails to identify which is why the three Act structure so easily misleads writers to create less than compelling stories Once you understand how this four part story structure works you can use it as a guide to help shape your story into a well crafted screenplay The 15 Minute Movie Method isn't a formula for writing a story but a set of guidelines that you can test for yourself with your own favorite movies By following The 15 Minute Movie Method guidelines you can learn how to structure your screenplay to tell a compelling intriguing story with any idea You'll learn the four basic parts of any story how to divide your screenplay into eight 15 minute segments that each tell a mini story what type of information each story segment needs to show the audience how the beginning and end of your story is related how to create the toughest villain for your particular hero who the most important character of your story really is Hint it's not your hero and much more with specific exercises that anyone can follow whether you're a novice trying to write a first screenplay or a veteran screenwriter who needs to fix a problem with an existing screenplay By taking you step by step through the process of turning a good idea into a well structured story

The 15 Minute Movie Method can show you how to write a screenplay with less hassle frustration and confusion so you can spend more time actually writing and enjoying the process of creating the story that you want to share with the world

Acting for Movies and TV -The Technique- hugo n arturi,2024-11-30 Hello I am the author and will explain The Contents of the Book You will learn the technique that I the great Hollywood actors mentioned on the cover and inside the book and others use to create a character for a movie and how to enter the world of cinema quickly and without complications These actors use this technique and the audience approves it They briefly and partially describe their techniques in the program Inside the Actors Studio on Bravo Channel where you can watch the videos any time I explain the technique to you with all the essential elements and details they don t mention You learn to express your character s true feelings in a movie not to fake them by screaming and or making voluminous gestures as taught in many acting schools You ll learn the technique from A to Z A is when you start reading the book and Z is at the end of your training when you ll be ready to act as the protagonist in a professional movie Guaranteed THE WARRANTY While you are training you can watch the videos of the actor s interviews and verify if it s what they comment You don t need acting experience just an inexpensive camcorder the book and the desire to become a professional actor My students say the exercises are entertaining fun and easy to learn you just read and shoot the practice scenes The idea is to make an acting and filming team of three two perform the scene while one films it and then you rotate roles You can study the technique alone but you would need practice If you have someone to do it with that s perfect Also I explain an easy way to shoot scenes like those in the movies that even a child can do VERY IMPORTANT My system allows you to learn the technique without a teacher I give you the elements for self control and correction the why and how to do it are explained in the chapter The John Travolta Test What do you do after learning the technique How do you become a professional actor I explain to you the ESSENTIAL steps to enter the world of cinema and become a successful actor and MOST IMPORTANTLY how to avoid the setbacks that inexperience could bring and prevent you from spending years wandering and waiting for success New actors spend years gaining the experience you

will acquire quickly by learning this technique In my book you will not find stories anecdotes metaphors unrelated issues or useless exercises to entertain elements you find in most books on the same subject that authors use as book fillers and in acting schools as hour fillers for lack of a solid technique to teach If you want or dream of being a professional actor my book gives you all the elements to achieve it Guaranteed But it s up to you My challenge find in the world an acting school or a book that offers 25% of the material contained in my book you will not find it If you don t want to be a professional actor but would like to learn the technique you can use it as the basis of a game to play with friends Some of my students like to do this and they say it is a funny game and including more people makes it more fun The conclusion you learn the real Hollywood movie acting technique save a lot of money do not waste years in acting schools or workshops and work as a professional actor in a short amount of time Someone asked me Why is your book with such important content so cheap I wrote it for various reasons for my love of teaching to young people and movie acting NOT TO MAKE MONEY and also to help young people not to lose years in school and go into debt with creditors to pay courses and for others to use the technique as a healthy fun game Inside the book you have my email address to ask me questions Read what AI says about the book

Dramatic Effects with a Movie Camera is a practical guide to the visual storytelling potential of different camera techniques demonstrating how they can produce compelling shots and sequences. By exploring how a close up shot of a character's face can help the viewer share their fear or joy or how a moving camera can reveal plot points connect objects and characters in space or give clues to their state of mind Gail Segal and Sheril Antonio show how choice of shot can dramatically affect your narrative. With detailed analysis of clips from 45 films from 30 countries this is a unique window into how movie making masters have made the most of their cameras and how you can too.

New Spectral Methods for Analysis of Source/filter Characteristics of Speech Signals Baris Bozkurt, Similar, 2006 This study proposes a new spectral representation called the Zeros of Z Transform ZZT which is an all zero representation of the z transform of the signal. In addition new chirp group delay processing techniques are developed for analysis of resonances of a signal. The combination of the ZZT representation with the chirp group delay processing algorithms provides a useful domain to study resonance characteristics of source and filter components of speech. Using the two representations effective algorithms are developed for source tract decomposition of speech glottal flow parameter estimation formant tracking and feature extraction for speech recognition. The ZZT representation is mainly important for theoretical studies. Studying the ZZT of a signal is essential to be able to develop effective chirp group delay processing methods. Therefore first the ZZT representation of the source filter model of speech is studied for providing a theoretical background. We confirm through ZZT representation that anti causality of the glottal flow signal introduces mixed phase characteristics in speech signals. The ZZT of windowed speech signals is also studied since windowing cannot be avoided in practical signal processing algorithms and the effect of windowing on ZZT representation is drastic. We show that separate patterns exist in ZZT representations of windowed speech signals for the glottal flow and the vocal tract contributions. A decomposition method for source tract separation is developed based on these patterns in ZZT. We define chirp group delay as group delay calculated on a circle other than the unit circle in z plane. The need to compute group delay on a circle other than the unit circle comes from the fact that group delay spectra are often very noisy and cannot be easily processed for formant tracking purposes the reasons are explained through ZZT representation. In this thesis we propose methods to avoid such problems by modifying the ZZT of a signal and further computing the chirp group delay spectrum. New algorithms based on processing of the chirp group delay spectrum are developed for formant tracking and feature estimation for speech recognition. The proposed algorithms are compared to state of the art techniques. Equivalent or higher efficiency is obtained for all proposed algorithms. The theoretical parts of the thesis further discuss a mixed phase model for speech and phase processing problems in detail. Index Terms spectral representation source filter separation glottal flow estimation formant tracking zeros of z transform group delay processing phase processing
