The first four chapters present novel examples in four integral areas of the mathematics curriculum namely arithmetic logic algebra and geometry. The last two chapters expose readers to topics in algebra and geometry that have been neglected at the secondary school level Throughout the book the focus is on introducing problem solving techniques that will be useful in everyday life With over 300 problems and carefully worked solutions the book aims to foster a greater appreciation for mathematics through an exploration of useful and fascinating topics rarely addressed in the classroom In other words you can have fun with mathematics Mathematics In Architecture.
