A History of Science in World Cultures Scott L. Montgomery, Alok Kumar, 2015-06-12 To understand modern science it is essential to recognize that many of the most fundamental scientific principles are drawn from the knowledge of ancient civilizations Taking a global yet comprehensive approach to this complex topic *A History of Science in World Cultures* uses a broad range of case studies and examples to demonstrate that the scientific thought and method of the present day is deeply rooted in a pluricultural past Covering ancient Egypt Mesopotamia India Greece China Islam and the New World this volume discusses the scope of scientific and technological achievements in each civilization and how the knowledge it developed came to impact the European Renaissance Themes covered include the influence these scientific cultures had upon one another the power of writing and its technologies visions of mathematical order in the universe and how it can be represented and what elements of the distant scientific past we continue to depend upon today Topics often left unexamined in histories of science are treated in fascinating detail such as the chemistry of mummification and the Great Library in Alexandria in Egypt jewellery and urban planning of the Indus Valley hydraulic engineering and the compass in China the sustainable agriculture and dental surgery of the Mayas and algebra and optics in Islam This book shows that scientific thought has never been confined to any one era culture or geographic region Clearly presented and highly illustrated *A History of Science in World Cultures* is the perfect text for all students and others interested in the development of science throughout history

Intracellular

biomineralization in bacteria Damien Faivre, 2014-11-14 Bacteria can sequester metals and other ions intracellularly in various forms ranging from poorly ordered deposits to well ordered mineral crystals Magnetotactic bacteria provide one example of such intracellular deposits They synthesize intracellular magnetic minerals of magnetite Fe_3O_4 and or greigite Fe_3S_4 magnetosomes which are generally less than 150 nm and organized into one or multiple chain structures The magnetosome chain s act like a compass needle to facilitate the navigation of magnetotactic bacteria by using the Earth s magnetic field Due to their ubiquitous distribution in aquatic and sedimentary environments magnetotactic bacteria play important roles in global iron cycling Other intracellular mineral phases have been evidenced in bacteria such as As_2S_3 CaCO_3 CdS Se_0 or various metal phosphates which may play as well a significant role in the geochemical cycle of these elements However in contrast to magnetotactic bacteria the biological and environmental function of these particles remains a matter of debate In recent years such intracellularly biomineralizing bacteria have become an attractive model system for investigating the molecular mechanisms of organelle like structure formation in prokaryotic cells The geological significance of intracellular biomineralization is important spectacular examples are fossil magnetosomes that may significantly contribute to the bulk magnetization of sediments and act as potential archives of paleoenvironmental changes In addition intracellular mineral deposits formed by bacteria have potentially versatile applications in biotechnological and biomedical fields After more than four decades of research the knowledge on intracellularly biomineralizing bacteria has greatly improved The aim of this Research Topic is to highlight recent advances in our understanding of intracellular biomineralization by bacteria Magnetotactic bacteria are a system of choice for that topic but other intracellularly biomineralizing bacteria may bring a unique perspective on that process Research papers reviews perspectives and opinion papers on i the diversity and ecology of intracellularly biomineralizing bacteria ii the molecular mechanisms of intracellular biomineralization iii the chemo and magneto taxis behaviors of magnetotactic bacteria iv the involvement of intracellularly biomineralizing bacteria in local or global biogeochemical cycling v the paleoenvironmental reconstructions and

paleomagnetic signals based on fossil magnetosomes vi and the applications of intracellular minerals in biomaterial and biotechnology were welcomed

Hadean Earth T. Mark Harrison, 2020-06-18 This book consolidates the latest research on the Hadean Eon the first 500 million years of Earth history which has permitted hypotheses of early Earth evolution to be tested including geophysical models that include the possibility of plate tectonic like behavior These new observations challenge the longstanding Hadean paradigm based on no observational evidence of a desiccated lifeless continent free wasteland in which surface petrogenesis was largely due to extraterrestrial impacts The eon was termed Hadean to reflect such a hellish environment That view began to be challenged in 2001 as results of geochemical analyses of greater than 4 billion year old zircons from Australia emerged These data were consistent with the

zircons forming in a world much more similar to today than long thought and interpreted to indicate that sediment cycling was occurring in the presence of liquid water This new view leaves open the possibility that life could have emerged shortly after Earth accretion The epistemic limitations under which the old paradigm persisted are closely examined The book is principally designed as a monograph but has the potential to be used as a text for advanced graduate courses on early Earth evolution
