Grondzik,2009-03-03 Commissioning is coming of age Savvy building owners have adopted commissioning as an effective way to improve the facility acquisition process Green building initiatives have embraced commissioning as a way of assuring quality in the delivery of high performance buildings This long established quality control process for building mechanical systems is emerging as a broader construction management tool improving nearly all aspects of a project What exactly is this thing called commissioning Principles of Building Commissioning answers this fundamental question with the first all inclusive practical guide to the application of the principles of commissioning The book clarifies the underlying philosophy of commissioning the why what when and who of this process Shaped by the ASHRAE Guideline 0 view of the world of commissioning Building Commissioning Maps out the territory of commissioning Outlines its defining characteristics Explains its flow of processes Demystifies its documentation Making the fundamentals of commissioning accessible to all parties building owners and operators architects and engineers users and suppliers who may be called upon to join the commissioning team for a particular project Building Commissioning serves as the professional s road map to the commissioning process from the predesign phase through occupancy **HVAC Systems Commissioning Manual** ,2013

Handbook of Heating, Ventilation, and Air Conditioning Jan F. Kreider,2000-12-26 The building industry accounts for about 25 percent of the US gross national product through the design construction operation and maintenance of commercial institutional and residential buildings The Handbook of Heating Ventilation and Air Conditioning provides a current comprehensive review of the latest procedures and trends in the industry It combines practice and theory systems and control and modern methods and technologies to provide in one volume all of the design and operation information needed by HVAC engineers Through a link on the CRC Web site owners of the handbook can access new material periodically posted by the author **HVAC Commissioning Guidebook** Maija Virta,2021-03-31 Green buildings have become common in India and other countries in Asia However there is a concern regarding the performance of green buildings failing to meet the expectations of clients during the operation One of the key reasons for this is poorly commissioned HVAC systems In this publication we provide tools and knowhow for more efficient HVAC commissioning It gives answers for four major questions why commissioning is needed how to perform proper commissioning which key performance issues of common HVAC equipment need to be considered and what kind of checklists are used during commissioning It covers the entire commissioning process beginning with the owner s project requirements and commissioning design reviews Then it explains procedures during installation and start up of equipment followed by the functional performance testing seasonal commissioning and 10 months operation review This publication is developed by Indian Society of Heating Refrigeration and Air Conditioning Engineers ISHRAE for Indian and Asian requirements in conjunction with the Federation of European HVAC

Commissioning Charles Nehme, In the complex ecosystem of a modern commercial building many systems work in harmony to create a productive and comfortable environment While the structural integrity and aesthetic design are visible the true heart of the building often remains unseen the intricate network of ducts dampers and fans that deliver the very air we breathe This invisible river of conditioned air is a critical determinant of occupant health comfort and a building's overall energy efficiency When this system is in perfect harmony its presence is felt only as a consistent pleasant atmosphere When it falls out of balance however the consequences are immediate and frustrating the sudden chill of a cold spot the stifling heat of a hot spot and the endless cycle of occupant complaints This book *The Delicate Art of Airflow Balancing* is born from the belief that mastering this invisible system is a craft worthy of deep study It is a comprehensive guide to the specialized skill of HVAC commissioning a process that goes far beyond simple maintenance It is about understanding the fundamental physics of airflow mastering the tools of the trade and applying a methodical almost artistic approach to bringing an entire building's HVAC system into perfect equilibrium Drawing on decades of hands on experience this book demystifies the complexities of air balancing providing a practical roadmap for technicians and engineers to achieve not just functional

systems but truly high performing comfortable and efficient ones It is an invitation to elevate your skills from a technician to a true master of the delicate art of airflow balancing

A Technical Comparison of Voluntary and Involuntary Sustainable Rating Systems for Building Development Roshan Moradali Mehdizadeh,2011 ABSTRACT There are five different publications that establish guidelines for sustainable building development that are examined in this report 1 Leadership in Energy and Environmental Design LEED 2 CalGreen 3 the International Green Construction Code IGCC 4 ASHRAE Standard 189 1 Standard 189 1 and 5 The San Francisco s Green Building Ordinance SFGBO Having

multiple publications can cause confusion among building developers architects engineers building consultants or various jurisdictions on what publication to follow use or reference in building development projects This thesis will provide various parties involved in building development a thorough understanding of each publication and the similarities or differences between them which will ultimately assist in identifying areas for all publications to improve Specifically this thesis demonstrates that the Material and Energy sections for all the publications must advance beyond the current requirements Also the comparison validates that CalGreen s Tier 2 is similar to LEED s local ordinances like the SFGBO This may mean two things 1 LEED will need to advance its gold or platinum certification requirements or potentially become less relevant or 2 local ordinances should reference or adopt CalGreen Tier 2 so that there is common language between local and state regulations This thesis identifies that LEED has the most stringent guidelines under the Building Site section out of all the publications Likewise the IGCC and Standard 189.1 have provisions under Water Use that push beyond other publications Additionally similar language between LEED and Standard 189.1 was found which was unsurprising as both publications are authored by the USGBC

Deep Energy Retrofit Alexander Zhivov, Rüdiger Lohse, 2020-07-13 This book provides detailed information on how to set up Deep Energy Retrofits DERs in public buildings and shares in depth insights into the current status of the major technologies strategies and best practice examples of how to cost effectively combine them Case studies from the U S A and Europe show that that Deep Energy Retrofit can be achieved with a limited core technologies bundle readily available on the market Characteristics of some of these core technology measures depend on the technologies available on an individual nation s market on the minimum requirements of national standards and on economics as determined by a life cycle cost analysis Also requirements to building envelope related technologies e g insulation levels windows vapor and water barriers and requirements for building

airtightness depend on specific climate conditions This Guide provides best practice examples of how to apply these technologies in different construction situations High levels of energy use reduction using core technology bundles along with improvements in indoor climate and thermal comfort can be only achieved when a Deep Energy Retrofit adopts a quality assurance process In addition to design construction commissioning and post occupancy phases of the quality assurance process the Guide emphasizes the importance of clearly and concisely formulating and documenting the Owner s goals expectations and requirements for the renovated building during development of the statement of work Another important component of the quality assurance process is a procurement phase during which bidders qualifications their understanding of the scope of work and its requirements and their previous experience are analyzed The building sector holds the potential for tremendous improvements in terms of energy efficiency and reducing carbon emissions and energy retrofits to the existing building stock represent a significant opportunity in the transition to a low carbon future Moreover investing in highly efficient building materials and systems can replace long term energy imports contribute to cost cutting and create a wealth of new jobs Yet while the technologies needed in order to improve energy efficiency are readily available significant progress has not yet been made and best practices for implementing building technologies and renewable energy sources are still relegated to small niche applications Offering essential information on Deep Energy Retrofits the book offers a valuable asset for architects public authorities project developers and engineers alike
