The "Broken" Plural Problem in Arabic and Comparative Semitic Robert R. Ratcliffe, 1998-12-15 The formal aspects of non concatenative morphology have received considerable attention in recent years but the diachronic dimensions of such systems have been little explored The current work applies a modern methodological and theoretical framework to a classic problem in Arabic and Semitic historical linguistics the highly allomorphic system of stem internal or broken plurals It shows that widely accepted views regarding the historical development of this system are untenable and offers a new hypothesis The first chapter lays out a methodology for comparative historical research in morphology The next two chapters present an analysis of Arabic morphology based on contemporary formal linguistic approaches and applies this analysis to the noun plural system Chapter Four shows that neither semantic shift nor ablaut type sound change account adequately for the data The fifth chapter offers a systematic comparison of the plural systems of Semitic languages incorporating much new research on the languages of South Arabia and Ethiopia Chapter Six proposes a new reconstruction *Seeing, second edition* John P. Frisby, James V. Stone, 2010-04-02 An accessible yet rigorous and generously illustrated exploration of the computational approach to the study of biological vision Seeing has puzzled scientists and philosophers for centuries and it continues to do so This new edition of a classic text offers an accessible but rigorous introduction to the computational approach to understanding biological visual systems The authors of Seeing taking as their premise David Marr's statement that to understand vision by studying only neurons is like trying to understand bird flight by studying only feathers make use of Marr's three different levels of analysis in the study of vision the computational level the algorithmic level and the hardware implementation level Each chapter applies this approach to a different topic in vision by examining the problems the visual system encounters in interpreting retinal images and the constraints available to solve these problems the algorithms that can realize the solution and the implementation of these algorithms in neurons Seeing has been thoroughly updated for this edition and expanded to more than three times its original length It is designed to lead the reader through the problems of vision from the common but mistaken idea that seeing consists just of making pictures in the brain to the minutiae of how neurons collectively encode the visual features that underpin seeing Although it assumes no prior knowledge of the field some chapters present advanced material This makes it the only textbook suitable for both undergraduate and graduate students that takes a consistently computational perspective offering a firm conceptual basis for tackling the vast literature on vision It covers a wide range of topics including aftereffects the retina receptive fields object recognition brain maps Bayesian perception motion color and stereopsis MatLab code is available on the book's website which includes a simple demonstration of image convolution

Panda,2009-10-01 Nanoscience is an interdisciplinary field that have encompassed physics biology engineering chemistry and computer science among others the prefix nano appears with increasing frequency in scientific journals and the news Thus as we increase our ability to fabricate computer chips with smaller features and improve our ability to cure disease at the molecular level nanotechnology is at the doorstep Scientists and engineers believe that the fabrication of nanomachines nanoelectronics and other nanodevices will help to solve numerous problems faced by mankind today related to energy health and materials development In nanoelectronics there are two opposing developments the lithographic scaling down of semiconductor components tending towards the sub10 nanometer region to supramolecular self assembling macroscopic structure with new properties Currently the trends are mixed and one can build a variety of structures of all scales For example one can build large scale supramolecular structures serving as templates for building circuits with nanoscale components On the nanoelectronics architecture side there have also been many interesting developments trying to cope with the increasing density and smallness of components and the needs of self assembly and fault tolerance In the emerging field of nanotechnology the production of nanostructures having special physical and chemical properties with respect to those of bulk materials is an objective due to their limited size and high density of corner or edge surface sites Metal nanoparticles have received significant scientific and technological interest because of their use in applications such as catalysis electronics optics optoelectronics biological and chemical sensing and SERS Nanotechnology is now creating a growing sense of excitement in the life sciences especially biomedical devices and biotechnology as there is an immense opportunity to arrange and rearrange molecular structures The global market for nanotechnology products is worth an estimated compound annual growth rate CAGR of 11.1% from 2010 to 2015 The largest segment of the market made up of nanomaterials is expected to increase at a 5 year CAGR of 14.7% The book contains polymeric nanofibres synthesis of nanostructure analysis of electron currents through nanojunctions water soluble carbon nanotubes nanoelectronic switching networks growth of silica nanorods magnetic nanostructures nanomachining of microscope tips and carbon nanotubes nanocrystalline semiconductors and many more The present book is a sincere attempt to make the readers aware of the evolutionary trends underlying modern engineering practice which are grounded not only on the tried true principles techniques of the past but also on more recent current advances This book will be an invaluable resource to technocrats researches new entrepreneurs technical institutions introduction to this field TAGS Nanotechnology Nanotechnology
