Xmas E. V. Greenelsh,1962 **Collective Intelligence in Computer-Based Collaboration** John B. Smith,1994-08-01 Proposing a new paradigm for Computer Supported Cooperative Work CSCW this ground breaking book presents a research agenda for developing and testing that paradigm It constitutes the first attempt to outline a comprehensive model of collaboration that integrates the cognitive conceptual and social dynamics of groups The challenge faced by all groups engaged in intellectual work is on the one hand to divide the task so that efforts of individual members may proceed in parallel and on the other hand to synthesize their separate contributions to form a coherent whole Addressing this challenge Smith examines the general form of a theory of computer based collaboration that extends across different tasks and working situations He uses the work of Newell Simon and Anderson as a base from which to consider a group as a form of distributed information processing system Within groups there are constructs analogous to human long term and short term memory conceptual processes and problem solving and knowledge construction strategies He discusses two metacognitive issues awareness and control as they occur in collaborative behavior And he reviews a number of advanced computer systems that support collaboration focusing on their impact on the thinking and behavior of groups Smith's theoretical framework combines elements of Information Processing System theory and its detailed process models of cognitive behavior with the situated perspective of activity theory The book suggests new and useful ways of conceiving problems and solutions to all those interested in the ways in which people interact with each other and with computers to achieve goals

Dynamics of Advanced Materials and Smart Structures Kazumi Watanabe,Franz Ziegler,2013-04-17 Two key words for mechanical engineering in the future are Micro and Intelligence It is well known that the leadership in the intelligence technology is a matter of vital importance for the future status of industrial society and thus national research projects for intelligent materials structures and machines have started not only in advanced countries but also in developing countries Materials and structures which have self sensing diagnosis and actuating systems are called intelligent or smart and are of growing research interest in the world In this situation the IUT AM symposium on Dynamics of Advanced Materials and Smart Structures was a timely one Smart materials and structures are those equipped with sensors and actuators to achieve their designed performance in a changing environment They have complex structural properties and mechanical responses Many engineering problems such as interface and edge phenomena mechanical and electro magnetic interaction

coupling and sensing actuating and control techniques arise in the development of intelligent structures. Due to the multi-disciplinary nature of these problems, all of the classical sciences and technologies such as applied mathematics, material science, solid and fluid mechanics, control techniques, and others must be assembled and used to solve them. IUTAM well understands the importance of this emerging technology. An IUTAM symposium on Smart Structures and Structronic Systems, chaired by U. Smart Cyber Physical Systems, G.R. Karpagam, B.
