The Metaphysical Foundations Of Modern Science E A Burtt:

The Metaphysical Foundations of Modern Science Edwin Arthur Burtt, 2003-01-01 This classic in the philosophy of science describes and analyzes the profound change from the philosophy of the Middle Ages to the modern view of humanity's less central place in the universe. It offers a fascinating analysis of the works of Copernicus, Kepler, Galileo, Descartes, Hobbes, Gilbert, Boyle, and Newton. Burtt, Historian and Philosopher** D. Villemaire, 2002-02-28 Here is a much needed study of the American historian and philosopher E A Burtt. H. Floris Cohen, author of *The Scientific Revolution: A Historiography*, has described Burtt as an individual thinker beyond philosophical or historical currents or fashion. Burtt's book *The Metaphysical Foundations of Modern Physical Science* is something of a puzzle within the context of twentieth-century intellectual history, especially American intellectual history. Burtt's pioneering study of the scientific revolution has proved to be prophetic in its rejection of both scientism and positivism. Published in 1924, Burtt's book continues to be read in educated circles and remains both the rose and the thorn on university reading lists, raising skeptical questions about science, methods, and science knowledge just as it did seventy-five years ago. This book examines Burtt's public, academic, and personal life. From his politics of conscience after World War I on through the Cold War, Burtt is shown to be a man of unparalleled integrity whose relentless search for philosophic understanding drove his more quixotic philosophical quests and steered his personal life, including its tragic dimension, toward simple virtue. The many who have been affected by *The Metaphysical Foundations* will be especially interested in this new perspective on the life and thought of its author. Those who have not read Burtt's books might be inspired to study this unusual American thinker. *The Metaphysical Foundations of Modern Science* E. A. Burtt, 2016-05-15 To the medieval thinker, man was the center of creation and all of nature existed purely for his benefit. The shift from the philosophy of the Middle Ages to the modern view of humanity's less central place in the universe ranks as the greatest revolution in the history of Western thought, and this classic in the philosophy of science describes and analyzes how that profound change occurred. A fascinating analysis of the works of Copernicus, Kepler, Galileo, Descartes, Hobbes, Gilbert, Boyle, and Newton, it not only establishes the reasons for the triumph of the modern perspective but also accounts for certain limitations in this view that continue to characterize contemporary scientific thought. A criticism as well as a history of the change that made possible the rise of modern science, this volume is also a guide to understanding the methods and accomplishments of the great philosopher-scientists of the sixteenth and seventeenth centuries. **The**
