MAJOR FUNCTIONS OF MUSCULAR SYSTEM

- Movement of the body. Contraction of skeletal muscles is responsible for the overall movements of the body, such as walking, running, and manipulating objects with hands.
- Maintenance of posture. Skeletal muscles constantly maintain tone, which keeps us sitting or standing erect.
- Respiration. Muscles of the thorax carry out breathing movements.
- Production of body heat. When skeletal muscle contract, heat is given off as a by-product, this released heat is critical to maintenance of body temperature.
- Communication. Skeletal muscles are involved in all aspects of communication, including speaking, writing, typing, gesturing, and facial expressions.
- Constriction of organs and vessels. The contraction of smooth muscle within the walls of internal organs and vessels causes those structures to constrict. This constriction can

help propel and mix food and water in the digestive tract, propel secretions from organs, and regulate blood flow through vessels.

- Contraction of the heart. The contraction of cardiac muscle causes the heart to beat, propelling blood to all parts of the body.
