and researchers *Blue Skies over Beijing* Matthew E. Kahn, Siqi Zheng, 2016-05-17 How individuals and the government are changing life in China's polluted cities Over the past thirty years even as China's economy has grown by leaps and bounds the environmental quality of its urban centers has precipitously declined due to heavy industrial output and coal consumption The country is currently the world's largest greenhouse gas emitter and several of the most polluted cities in the world are in China Yet millions of people continue moving to its cities seeking opportunities *Blue Skies over Beijing* investigates the ways that China's urban development impacts local and global environmental challenges Focusing on day to day choices made by the nation's citizens families and government Matthew Kahn and Siqi Zheng examine how Chinese urbanites are increasingly demanding cleaner living conditions and consider where China might be headed in terms of sustainable urban growth Kahn and Zheng delve into life in China's cities from the personal perspectives of the rich middle class and poor and how they cope with the stresses of pollution Urban parents in China have a strong desire to protect their children from environmental risk and calls for a better quality of life from the rising middle class places pressure on government officials to support greener policies Using the historical evolution of American cities as a comparison the authors predict that as China's economy moves away from heavy manufacturing toward cleaner sectors many of China's cities should experience environmental progress in upcoming decades Looking at pressing economic and environmental issues in urban China *Blue Skies over Beijing* shows that a cleaner China will mean more social stability for the nation and the world

100% Renewable Energy Transition Claudia Kemfert, Christian Breyer, Pao-Yu Oei, 2020-01-23 Energy markets are already undergoing considerable transitions to accommodate new renewable energy forms new decentral energy players and new system requirements e.g flexibility and resilience Traditional energy markets for fossil fuels are therefore under pressure while not yet mature renewable energy markets are emerging As a consequence investments in large scale and capital intensive traditional energy production projects are surrounded by high uncertainty and are difficult to hedge by private entities Traditional energy production companies are transforming into energy service suppliers and companies aggregating numerous potential market players are emerging while regulation and system management are playing an increasing role To address these increasing uncertainties and complexities economic analysis forecasting modeling and investment assessment require fresh approaches and views Novel research is thus required to simulate multiple actor interplays and idiosyncratic behavior The required approaches cannot deal only with energy supply but need to include active demand and cover systemic aspects Energy market transitions challenge policy making Market coordination failure the removal of barriers hindering restructuring and the combination of market signals with command and control policy measures are some of the new aims of policies The aim of this Special Issue is to collect research papers that address the above issues using novel methods from any adequate perspective including economic analysis modeling of systems behavioral forecasting and policy assessment The issue will include but is not be limited to Local control schemes and algorithms for distributed generation systems

Centralized and decentralized sustainable energy management strategies Communication architectures protocols and properties of practical applications Topologies of distributed generation systems improving flexibility efficiency and power quality Practical issues in the control design and implementation of distributed generation systems Energy transition studies for optimized pathway options aiming for high levels of sustainability

The Case for Climate Capitalism Tom Rand,2020-03-03 A call for the Left and Right the business community and environmentalists bankers and activists to join together reclaim capitalism and force profits to align with the planet A warming climate and a general distrust of Wall Street has opened a new cultural divide among those who otherwise agree we must mitigate climate risk anti market critics such as Naomi Klein target capitalism itself as a root cause of climate change while climate savvy business leaders believe we can largely continue with business as usual by tinkering around the edges of our economic system Rand argues that both sides in this emerging cultural war are ill equipped to provide solutions to the climate crisis and each is remarkably naïve in their view of capitalism On one hand we cannot possibly transition off fossil fuels without the financial might and entrepreneurial talent market forces alone can unlock On the other without radical changes to the way markets operate capitalism will take us right off the climate cliff Rejecting the old Left Right ideologies Rand develops a more pragmatic view capable of delivering practical solutions to this critical problem A renewed capitalism harnessed to the task is the only way we might replace fossil fuels fast enough to mitigate severe climate risk If we leave our dogma at the door Rand argues we might just build an economy that survives the century

Treves,Francesco Seatzu,Seline Trevisanut,2013-10-23 Increasingly transnational corporations developed countries and

private actors are broadening the boundaries of their investments into new territories in search of a higher return on capital. This growth in direct foreign investment involves serious concerns for both the investor and host state. Various exponents of international civil society and non governmental organisations persuasively claim that such growth in foreign investments constitutes potential and serious hazards both to the environment and the fundamental rights and freedoms of local populations. This book explores from an international law perspective the complex relationship between foreign investments and common concerns i.e. values that do not coincide or do not necessarily coincide with the interests of the investor and of the host state. It pays particular attention to the role of the main international development banks in reconciling the needs of foreign investors with the protection of common concerns such as the environment, human rights and labour rights. Among its collection of essays the volume asks how much regulatory space investment law leaves, whether international investment law is an effective means of balancing contrasting interests and whether investment arbitration currently constitutes a mechanism of global governance. In collecting the outlooks of various experts in human rights, environmental and international economic law, this book breaks new ground in exploring how attention to its legal aspects may help in navigating the relationship between foreign investment and common concerns. In doing so, the book provides valuable insights into the substantive issues and institutional aspects of international investment law.
