**Ontology-Based Development of Industry 4.0 and 5.0 Solutions for Smart Manufacturing and Production** János Abonyi,László Nagy,Tamás Ruppert,2024-01-01 This book presents a comprehensive framework for developing Industry 4 0 and 5 0 solutions through the use of ontology modeling and graph based optimization techniques With effective information management being critical to successful manufacturing processes this book emphasizes the importance of adequate modeling and systematic analysis of interacting elements in the era of smart manufacturing The book provides an extensive overview of semantic technologies and their potential to integrate with existing industrial standards planning and execution systems to provide efficient data processing and analysis It also investigates the design of Industry 5 0 solutions and the need for problem specific descriptions of production processes operator skills and states and sensor monitoring in intelligent

spaces The book proposes that ontology based data can efficiently represent enterprise and manufacturing datasets The book is divided into two parts modeling and optimization The semantic modeling part provides an overview of ontologies and knowledge graphs that can be used to create Industry 4.0 and 5.0 applications with two detailed applications presented on a reproducible industrial case study The optimization part of the book focuses on network science based process optimization and presents various detailed applications such as graph based analytics assembly line balancing and community detection The book is based on six key points the need for horizontal and vertical integration in modern industry the potential benefits of integrating semantic technologies into ERP and MES systems the importance of optimization methods in Industry 4.0 and 5.0 concepts the need to process large amounts of data while ensuring interoperability and re usability factors the potential for digital twin models to model smart factories including big data access and the need to integrate human factors in CPSs and provide adequate methods to facilitate collaboration and support shop floor workers

**Innovations in Smart Cities Applications Volume 7** Mohamed Ben Ahmed, Anouar Abdelhakim Boudhir, Rani El Meouche, İsmail Rakıp Karas, 2024-02-19 Many cities in the developed world are undergoing a digital revolution and have placed the smart city on their list of priorities Smart cities use technological solutions such as Internet of Things AI 5G Big Data Cloud computing Smart Grid as well as all the emerging technologies of the digital era to improve the management and efficiency of the urban environment The aim is to make residents happier healthier smarter and more prosperous and to make the city greener cleaner more sustainable more responsible more functional more resilient and more competitive Enhanced by extensive research studies and carried out under the guidance of international scientific experts in the field This book explores various papers related to smart cities including digital twins geo smart information systems education healthcare economy and digital business building and home automation environment and agriculture and information technologies and computer science
