MDS About 50% of MDS cases are characterized by the presence of cytogenetic abnormalities The correct morphological and cytogenetic analysis interpretation plays an important role in diagnosis and prognosis of these disorders Cell death and an inflammatory gene signature are associated with MDS Better understanding of the genetic and molecular mechanisms of MDS pathogenesis provides an opportunity for new treatment strategies to be developed Promising novel therapies targeting pathophysiological mechanisms of MDS are being studied but the drugs currently used in MDS therapy remain limited The only curative therapy for MDS is allogeneic hematopoietic stem cell transplantation Recent advances in strategies to minimize transplant related toxicity make this treatment possible for more MDS patients who are sufficiently fit

Myelodysplastic Syndromes & Secondary Acute Myelogenous Leukemia Azra Raza, Suneel D. Mundle, 2012-12-06

Myelodysplastic syndromes are to the bone marrow what pneumonia is to the lungs the response of an organ to a variety of etiologic insults like aging toxic exposure infections and auto immunity Among infectious causes alone pneumonia could be the result of a variety of possible pathogens including bacterial viral tuberculous or fungal agents Similarly MDS cannot be treated as a single disease Attempts to harness the inherent complexity of MDS by devising classifications which group the various syndromes as one disease is as misguided as saying that a pneumonia is not infectious because it did not respond to antibiotics Progress in the field will occur faster when we re analyze this premise Therefore until a clearer picture of the disease emerges it is best to treat each of the MDS syndromes as a separate entity Having no classification is better than a misleading one Cancer research has been notable for its periodic cycles of promise and hope followed by defeat and disappointments It is not that there is no solution but that the problem has not been identified precisely This book is our attempt to define the most crucial questions related to MDS that need to be addressed immediately through logic analysis and rigorous experimentation If the emerging problems appear daunting then instead of being overwhelmed by them we should follow the advice of the great 20th century thinker Antonio Gramsci pessimism of the intellect must be faced with the optimism of will *The myelodysplastic syndromes* Gregor E. G. Verhoef, 1992
