The One Planet Life A Blueprint For Low Impact Development:

The 'One Planet' Life David Thorpe, 2014-11-13 The One Planet Life demonstrates a path for everyone towards a way of life in which we don't act as if we had more than one planet Earth. The difference between this approach and others is that it uses ecological footprint analysis to help to determine how effective our efforts are. Much of the book is a manual with examples on how to live the good life and supply over 65% of your livelihood from your land with mostly positive impacts upon the environment. It examines the pioneering Welsh policy One Planet Development then considers efforts towards one planet living in urban areas. After a foreword by BioRegional One Planet Living co-founder Pooran Desai and an introduction by former Welsh environment minister Jane Davidson, the book contains an essay arguing that our attitude to planning land and development needs to change to enable truly sustainable development. Guidelines on finding land finance and creating a personal plan for one planet living. Detailed guides on sustainable building, supplying your own food, generating renewable energy, reducing carbon emissions from travel, land management, water supply and waste treatment. 20 exemplary examples at all scales from micro businesses to suburbs followed by Jane Davidson's Afterword. The book will interest anyone seeking to find out how a sustainable lifestyle can be achieved. It is also key reading for rural and built environment practitioners and policy makers keen to support low impact initiatives and for students studying aspects of planning, geography, governance, sustainability and renewable energy.

Sustainable Urbanization Mustafa Ergen, 2016-09-28 The rapid urbanization that began with industrialization has begun to cause many problems. New approaches are emerging today to minimize these problems and make urban areas more livable. These problems include insufficient social facilities in urban areas for increasing populations due to migration and unbalanced use of green areas, water and energy resources due to urbanization. Careless consumption and the pollution of natural resources will cause people many more problems in the future than they do today in urban development. Many professional disciplines have noticed this unbalanced development in urban areas. Urban areas have larger populations than rural areas today. Urban areas are developed neglectfully. Sustainability is needed as a criterion for urban areas to develop in a more livable and healthy fashion. Sustainable urban development approaches are seen in many fields ranging from land use to the use of natural resources in urban areas.

Introduction to Energy and Climate Julie Kerr, 2017-08-09 The purpose of this textbook is to provide a well-rounded working knowledge of both climate change and environmental sustainability for a wide range of students. Students will learn core concepts and methods to analyze energy and environmental impacts, will understand what is changing the earth's climate and what that means for life on earth now and in the future. They will also have a firm understanding of what energy is and how it can be used. This text intends to develop working knowledge of these topics with both technical and social implications. Students will find in one volume the integration and careful treatment of climate, energy and sustainability.

Materials for a Healthy, Ecological and Sustainable Built Environment Emina K. Petrović, Brenda Vale, Maibritt Pedersen Zari, 2017-03-23 Principles for Evaluating

Building Materials in Sustainable Construction Healthy and Sustainable Materials for the Built Environment provides a comprehensive overview of the issues associated with the selection of materials for sustainable construction proposing a holistic and integrated approach The book evaluates the issues involved in choosing materials from an ecosystem services perspective from the design stage to the impact of materials on the health of building users The three main sections of the book discuss building materials in relation to ecosystem services the implications of materials choice at the design stage and the impact of materials on building users and their health The final section focuses on specific case studies that illustrate the richness of solutions that existed before the rise of contemporary construction and that are consistent with a sustainable approach to creating built environments These are followed by modern examples which apply some if not all of the principles discussed in the first three sections of the book Provides a holistic and integrated approach to the issues associated with the selection of materials for sustainable construction Provides a thorough understanding of ecosystem services based on ecology research for built environment design Provides an original review of the impact of materials on human health Provides case studies to illustrate the points above

Architectural Thinking in a Climate Emergency Sofie Pelsmakers, James Benedict Brown, 2025-10-29
What is the role of architecture and the architect in the Anthropocene It s an immutable fact human activity is driving the climate and biodiversity crises that now threaten all life The damage we inflict on the planet undermines basic human rights displaces millions and intensifies structural racism sexism and segregation with the greatest burden falling on the most vulnerable people and ecosystems Architects must act The design and construction of most buildings and urban environments today are rooted in an economic model that pursues infinite growth Our profession is embedded in a paradigm that favours individual gain over collective benefit We are rewarded for overlooking the interdependence between people and the natural world Architecture contributes directly to environmental degradation and social injustice Architects agree that the profession must change But we lack the tools and knowledge to undertake the transformations that are urgently needed This book aims to address that need through 15 chapters illustrating how we can act collectively to make a difference

Architectural Thinking in a Climate Emergency brings together writers researchers educators students and practitioners working at the forefront of this transformation Contributors come from fourteen countries across Africa Asia Europe North and South America and Oceania Many are leading voices in their fields others are emerging thinkers introducing fresh perspectives from both academia and practice Above all they each affirm the architect's responsibility to help transition toward carbon neutral sustainable practices that advance social and environmental justice
