2009 held in Graz Austria SAMT brings together researchers dealing with a broad range of research topics related to semantic multimedia and a great diversity of applications. The current research shows that adding and using semantics of multimedia content is broadening its scope from search and retrieval to the complete media life cycle from content creation to distribution and consumption thus leveraging new possibilities in creating sharing and reusing multimedia content. While some of the contributions present improvements in automatic analysis and notation methods there is increasingly more work dealing with visualization user interaction and collaboration. We can also observe ongoing standardization activities related to semantic multimedia in both W3C and MPEG forming a solid basis for a wide adoption.

The conference received 41 submissions this year of which the Program Committee selected 13 full papers for oral presentation and 8 short papers for poster presentation. In addition to the scientific papers the conference program included two invited talks by Ricardo Baeza Yates and Stefan Ruger and a demo session showing results from three European projects. The day before the main conference offered an industry day with presentations and demos that showed the growing importance of semantic technologies in real world applications as well as the research challenges coming from them.

Management of Multimedia on the Internet Ehab S.

Al-Shaer, Giovanni Pacifici, 2003-06-30 In recent years we have witnessed the explosion of multimedia traffic on the Internet. The availability of high bandwidth connections together with the recent advances in high quality video and audio compression techniques have created a fertile ground for the growth of multimedia applications such as interactive video on demand, collaborative distance learning and remote medical diagnosis. Furthermore, the availability of low bit rate video and audio applications e.g. H.263 and G.728 and the proliferation of pervasive devices create a new demand for wireless multimedia communication systems. After a decade or more of research and development in multimedia networking, the research community has learned a number of lessons. First, increasing the capacity of the best effort networks and services does not provide an effective and permanent solution for offering a guaranteed Quality of Service (QoS). Second, the integration of service and network management is a key element in providing end-to-end service management. Third, management techniques for Internet multimedia services must be scalable and adaptive to guarantee QoS and maintain fairness with optimal network resource.

Connected Media in the Future Internet Era Ahmet Kondoz, Tasos Dagiuklas, 2016-10-08 This book describes recent innovations in 3D media and technologies with coverage of 3D media capturing, processing, encoding and adaptation, networking aspects for 3D Media and quality of user experience (QoE). The contributions are based on the results of the FP7 European Project ROMEO, which focuses on new methods for the compression and delivery of 3D multi-view video and spatial audio, as well as the optimization of networking and compression jointly across the future Internet. The delivery of 3D media to individual users remains a highly challenging problem due to the large amount of data involved, diverse network characteristics and user terminal requirements, as well as the user's context such as their preferences and location. As the number of visual views increases, current systems will struggle to meet the demanding requirements in terms of delivery of consistent video quality to fixed and mobile users. ROMEO will present hybrid networking solutions that combine the DVB-T2 and DVB-NGH broadcast access network technologies together with a QoE-aware Peer-to-Peer (P2P) distribution system that operates over wired and wireless links. Live streaming 3D media needs to be received by collaborating users at the same time or with imperceptible delay to enable them to watch together while exchanging comments as if they were all in the same location. This book is the last of a series of three annual volumes devoted to the latest results of the FP7 European Project ROMEO. The present volume provides state-of-the-art information on 3D multi-view video, spatial audio, networking protocols for 3D media, P2P 3D media streaming and 3D Media delivery across heterogeneous wireless networks among other topics. Graduate students and professionals in electrical engineering and computer science with an interest in 3D Future Internet Media will find this volume to be essential reading.

Digital Video Concepts, Methods, and Metrics Shahriar Akramullah, 2014-11-05 Digital Video Concepts Methods and Metrics Quality Compression Performance and Power Trade off Analysis is a concise reference for professionals in a wide range of applications and vocations It focuses on giving the reader mastery over the concepts methods and metrics of digital video coding so that readers have sufficient understanding to choose and tune coding parameters for optimum results that would suit their particular needs for quality compression speed and power The practical aspects are many Uploading video to the

Internet is only the beginning of a trend where a consumer controls video quality and speed by trading off various other factors. Open source and proprietary applications such as video e mail private party content generation editing and archiving and cloud asset management would give further control to the end user. Digital video is frequently compressed and coded for easier storage and transmission. This process involves visual quality loss due to typical data compression techniques and requires use of high performance computing systems. A careful balance between the amount of compression the visual quality loss and the coding speed is necessary to keep the total system cost down while delivering a good user experience for various video applications. At the same time power consumption optimizations are also essential to get the job done on inexpensive consumer platforms. Trade offs can be made among these factors and relevant considerations are particularly important in resource constrained low power devices. To better understand the trade offs this book discusses a comprehensive set of engineering principles strategies methods and metrics. It also exposes readers to approaches on how to differentiate and rank video coding solutions.
