Droplet Dynamics Under Extreme Ambient Conditions Kathrin Schulte, Cameron Tropea, Bernhard Weigand, 2022-08-30 This open access book presents the main results of the Collaborative Research Center SFB TRR 75 which spanned the period from 2010 to 2022 Scientists from a variety of disciplines ranging from thermodynamics fluid mechanics and electrical engineering to chemistry mathematics computer science and visualization worked together toward the overarching goal of SFB TRR 75 to gain a deep physical understanding

of fundamental droplet processes especially those that occur under extreme ambient conditions These are for example near critical thermodynamic conditions processes at very low temperatures under the influence of strong electric fields or in situations with extreme gradients of boundary conditions The fundamental understanding is a prerequisite for the prediction and optimisation of engineering systems with droplets and sprays as well as for the prediction of droplet related phenomena in nature The book includes results from experimental investigations as well as new analytical and numerical descriptions on different spatial and temporal scales The contents of the book have been organised according to methodological fundamentals phenomena associated with free single drops drop clusters and sprays and drop and spray phenomena involving wall interactions

Multiscale X-ray Structural Analysis of Cardiac Cells and Tissues Marius Reichardt, 2022 The cardiac function relies on an intricate molecular and cellular three dimensional 3d architecture of a complex dense and co dependent cellular network Structural alterations of the cardiac structure can affect its essential function and lead to severe dysfunction of the organ Cardiovascular diseases are the main cause of death worldwide with a rising incidence However it is not possible to give a generalized answer how the heart is formed Up to now cardiac structure as well as physiologic and disease related tissue alterations of the tissue are mainly investigated by established 2d imaging methods such as optical microscopy or electron microscopy This work presents a multiscale and multimodal X ray imaging approach which allows to probe the heart structure from the scale of entire intact murine hearts to the molecular organisation of the sarcomer structure While the molecular structure of the actomyosin complex is probed by scanning X ray diffraction the 3d arrangement of the cellular network is investigated by propagation based X ray phase contrast tomography In this context the concept of 3d virtual histology of cardiac tissue by X ray phase contrast tomography using laboratory sources as well as highly coherent synchrotron radiation is being further developed
