significant modifications to the steam engine which had first been patented in 1698 have been attributed to James Watt. Watt developed two important changes to these earlier models: the addition of a condenser and a rotative system that used a crank rather than a chain to transfer power. These improvements greatly improved the efficiency and power of the steam engine and led to a range of new uses. By 1800, Watt's innovations were being used throughout the mining and textile industries in Britain. In the 1820s, others such as the father and son team of George and Robert Stephenson applied the principles of steam power to transport, laying the foundation for the train mania of the 1840s.

The Industrial Turn in World History Peter Stearns, 2016-09-13 In *The Industrial Turn in World History*, Peter N. Stearns presents a concise yet far-reaching overview of the worldwide shift from agricultural societies to industrial societies over the past two centuries. Putting the implications for individuals and societies in global context while simultaneously considering the limits of generalization across cultures, Stearns's text explores the nature of industrialization across national and regional lines. Rather than portraying the Industrial Revolution as primarily a Western, early 19th-century development, this new narrative argues that the move to industrial societies is an ongoing and truly global shift. Taking a largely social and cultural approach, Stearns engages with the leading edge approach of looking at emotion historically, allowing readers to ask questions about the impact of industrial society on emotional experience and happiness levels. This innovating framing allows for use in a variety of courses including world history, economic history and more general courses on the Industrial Revolution.
