Renfro, 2009-06-29 Econometric theory as presented in textbooks and the econometric literature generally is a somewhat disparate collection of findings Its essential nature is to be a set of demonstrated results that increase over time each logically based on a specific set of axioms or assumptions yet at every moment rather than a finished work these inevitably form an incomplete body of knowledge The practice of econometric theory consists of selecting from applying and evaluating this literature so as to test its applicability and range The creation development and use of computer software has led applied economic research into a new age This book describes the history of econometric computation from 1950 to the present day based upon an interactive survey involving the collaboration of the many econometricians who have designed and developed this software It identifies each of the econometric software packages that are made available to and used by economists and econometricians worldwide *Economic Freedom and the American Dream* J. Anselin, 2013-03-09 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e.g. most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis
