22. Describe the structure and function utilized in living organisms.

Genes are segments of DNA that contain the instructions for making proteins. Proteins are the building blocks of life and are responsible for many of the functions of living organisms. Genes are passed from parent to offspring and are responsible for the inheritance of traits. The structure of a gene is a double helix, with the sugar-phosphate backbone and the nitrogenous bases in the center. The bases are paired in a specific way, with Adenine pairing with Thymine and Guanine pairing with Cytosine. This structure allows the genetic information to be stored and passed on accurately.
