

## Chapter 1 Outline

### 02.03.23

- Some would start to tell the story of the history of psychology with:
  - Ancient Greece
  - Demarcation in the late 19<sup>th</sup> century when science of psychology was formally proposed and instituted

#### Psychology in America

- The history of psychology provides perspective instead of just name and dates. It tells us about the important intersection of time and place that defines who we are.
- Getting a history of the field helps to make sense of where we are and how we got here.

#### A Prehistory of Psychology

- John Locke (1632-1704) and Thomas Reid (1710-1796) promoted empiricism, the idea that all knowledge comes from experience.
- Their work and others as well, emphasized the role of the human observer and the primacy of the senses in defining how the mind comes to acquire knowledge.
- In the early 1800s, American colleges and universities taught these principles as courses on mental and moral philosophy.

#### Physiology and Psychophysics

- German physiologist Hermann von Helmholtz (1821-1894) measured the speed of the neural impulse and explored the physiology of hearing and vision.
  - Helmholtz work indicated that our senses can deceive us and are not a mirror of the external world.
- Science of psychology was feasible.
- Though not a new idea, Helmholtz's work implied that there is a psychological reality and a physical

reality and that the two are not identical.

- German researchers Ernst Weber and Gustav Fechner named their work psychophysics, which was an investigation of the relationship between the mental (experiences of the senses) and the material (external reality).
  - Their work introduced methods for measuring the relationship between physical stimuli and human perception that would later serve as the basis for the new science of psychology.
- German physician, physiologist and philosopher Wilhelm Wundt (1832-1920) is credited as the formal developer of modern psychology.
  - Wundt helped establish the field of experimental psychology by promoting, providing classes, textbooks and a laboratory for training students.
  - Students were trained to offer detailed self-reports of their reactions to various stimuli, a procedure known as introspection.
  - In addition to the study of sensation and perception, research was done on mental chronometry, more commonly known as reaction time.
  - The work of Wundt and his students demonstrated that the mind could be measured and the nature of consciousness could be revealed through scientific means.
  - 4 years later this work lead to the first psychology laboratory to be opened in America.
