Section 2: Forest Biomes

Read the passage below and answer the questions that follow.

Tropical rain forests once covered about 20 percent of Earth's surface. Today, they cover less than 7 percent. Every 60 seconds, nearly 150 acres of tropical rain forest are cleared for logging operations, agriculture, cattle ranching, or oil exploration. Habitat destruction occurs when land inhabited by an organism is destroyed or altered. This destruction is the usual reason for a species becoming extinct. Warming temperatures and changes in precipitation from climate change also threaten rainforests. An estimated 50 million people live in tropical rainforests. These people are also threatened by habitat destruction. Their food, building materials, culture, and traditions come from and are uniquely connected to the rain forest. Habitat loss also destroys their way of life.
