Some of the answers below may differ in format but have the same value as your result. Please check with your instructor if a specific format is desired.

Chapter 9

- 9-2.** Why are simplifying assumptions in equilibrium problems restricted to relationships that are sums or differences?

Answer:

To simplify equilibrium calculations, we sometimes assume that the concentrations of one or more species are negligible and can be approximated as 0.00 M. In a sum or difference assuming a concentration is 0.00 M leads to an appropriate result. In contrast, if we were to simplify an equilibrium constant expression by assuming one or more concentrations are zero, we would be multiplying or dividing by 0.00, which would render the expression meaningless.

- 9-4.** Why do molar concentrations of some species appear as multiples in charge-balance equations?

Answer:

A charge-balance equation is derived by relating the concentration of cations and anions
no. mol/L positive charge = no. mol/L negative charge

For a doubly charged ion, such as Ba^{2+} , the concentration of charge for each mole is twice the molar concentration of the Ba^{2+} . That is,

$$\text{mol/L positive charge} = 2[\text{Ba}^{2+}]$$

Thus, the molar concentration of all multiply charged species is always multiplied by the charge in a charge-balance equation.

- 9-5.** Write the mass-balance expressions for a solution that is

Solutions:

- (a) 0.2 M in HF.

$$0.20 = [\text{HF}] + [\text{F}^-]$$

- (c) 0.10 M in H_3PO_4 .

$$0.10 = [\text{H}_3\text{PO}_4] + [\text{H}_2\text{PO}_4^-] + [\text{HPO}_4^{2-}] + [\text{PO}_4^{3-}]$$

- (e) 0.0500 M in HClO_2 and 0.100 M in NaClO_2 .

$$0.0500 + 0.100 = [\text{HClO}_2] + [\text{ClO}_2^-]$$

$$[\text{Na}^+] = C_{\text{NaClO}_2} = 0.100 \text{ M}$$

Plant Tissue Culture Manual - Supplement 7 K. Lindsey, 2013-11-11 Plant tissue culture has a long history dating back to the work of Gottlieb Haberlandt and others at the end of the 19th century but the associated concepts and techniques have reached a level of usefulness and application which has never been greater The technical innovations have given new insights into fundamental aspects of plant differentiation and development and have paved the way to the identification of strategies for the genetic manipulation of plants It is the aim of this manual to deliver a broad range of these techniques in a form which is accessible to students and research scientists of diverse backgrounds including those with little or no previous experience The themes

of the manual aim to reflect those research areas which have been advanced by tissue culture technology As was the case for the sister volume Plant Molecular Biology Manual the objective has been from the start to produce a manual which is at home on the laboratory bench The plastic covered ring bound format has proved to be most popular and is retained here Equally the emphasis has been on producing a collection of detailed step by step protocols each supplemented with an introductory text and practical footnotes to provide the next best thing to a supervisor at one's shoulder
