TECHNOLOGY INFORMATION

The function of the ignition system is to provide mechanical spark to ignite the fuel-air mixture in the engine cylinders. The ignition system of the engine is a separate system and is not part of the engine's overall electrical system. The magneto ign. ignition system based on electromagnetic aircraft engines. Magneto are engine-driven self-contained units that supply their own current without requiring external source of current. Magneto are frequently not maintained to requirements specified in LI 300 Manual - 400000-000 Series Magneto Maintenance and/without Manual, probably because they're so reliable and straightforward a robust magneto. Magneto require regular maintenance, and the consequences of neglect can be devastating.

Aircraft engines require an ignition system to have a dual ignition system – that is, two separate magnets to supply the electric current to the two spark plugs contained in each cylinder. One magnet system supplies the current to one set of plugs, while the second magnet system supplies the current to the other set of plugs. The redundant double ignition system provides better performance because of more efficient combustion and higher level of safety through redundancy.

Danfoss Slick magnetos have applications on many different engines and are known for the following design features:

- **Smaller and lighter design** allowing for a dramatically smaller magneto housing to save production and flight weight – as much as one pound lighter than competitive magnetos.
- **Redundant magnetos** Slick magnetos feature superior rotor support, reducing the need for magnet wires.
- **Easy to install** – Slick magnetos are up to 50% fewer parts than the competitive dual magnetos. In addition, 70% of the parts in any Slick magnetos are interchangeable with the competitor parts in other manufacturers Slick magnetos.
