Sustainable Ho Chi Minh City: Climate Policies for Emerging Mega Cities Antje Katzschner, Michael Waibel, Dirk Schwede, Lutz Katzschner, Michael Schmidt, Harry Storch, 2015-12-01 As climate change and urban development are closely interlinked and often interact negatively this edited volume takes Ho Chi Minh City HCMC Vietnam s first mega urban region

as a case study to analyse its vulnerability to climate change and to suggest measures towards a more sustainable urban development. The book offers an overview on land use planning regarding the aspects of urban flooding, urban climate, urban energy and urban mobility as well as spatial views from the angle of urban planning such as the metropolitan level, the city, the neighbourhood and building level. It shows that to a significant degree measures dealing with climate change can be taken from the toolbox of sustainable urban development and reflects how institutional structures need to change to enhance chances for implementation given socio cultural and economic constraints. This is merged and integrated into a holistic perspective of planning recommendations supporting the municipal government to increase its adaptive capacity. The authors are members of a German government funded research project on how to support HCMC's municipal government to adapt to risks related to climate change.

Bioregional Planning and Design: Volume I David Fanfani, Alberto Matarán Ruiz, 2020-07-20. This book provides a review of the bioregionalist theory in the field of spatial planning and design as a suitable approach to cope with the growing concerns about the negative effects of metropolization processes and the need for a sustainable transition. The book starts out with a section on rethinking places for community life and discusses the reframing of regional governance and development as well as social justice in spatial planning. It introduces the concept of the urban bioregion, a pivotal concept that underpins balanced polycentric spatial patterns and supports self-reliant and fair local development. The second part of the book focuses on planning and particularly on the issues that arise from the circular recovery of the relation between city and agro ecosystems for integrated planning and resilience of settlements and discusses topics such as foodshed planning, biophilic urbanism and the integration of rural development and spatial planning. This volume sets out the reference framework for Volume II which deals with more specific and operational issues related to spatial policies and settlement design.
