## Common Hazards of Concrete Work

- **Skin Irritation and Burns:** Direct contact with wet concrete can cause chemical burns, leading to discomfort and serious injuries if not promptly addressed, potentially resulting in dermatitis or other skin conditions.
- **Slips, Trips, and Falls:** Wet concrete surfaces are slippery, posing a risk of slips and falls, particularly on elevated platforms or scaffolding.
- **Respiratory Hazards:** Concrete work generates dust and fumes, potentially causing respiratory irritation, coughing, and breathing difficulties, with long-term exposure increasing the risk of respiratory conditions like silicosis.
- **Chemical Exposure:** Hazardous chemicals in concrete additives and compounds may cause burns, respiratory issues, or adverse health effects if not handled properly.
- **Struck by Incidents:** Concrete work presents the risk of being struck by tools such as hammers or by overhead hazards like concrete pump booms or truck chutes.
- **Manual Handling Injuries:** The physical nature of concrete work increases the risk of manual handling injuries from lifting heavy or awkward objects, shoveling concrete or dirt.

## Implementing Controls

- Wear boots, gloves, and appropriate clothing to avoid skin contact, and promptly wash any cement off skin and change socks if contaminated.
- Wear proper eye and respiratory protection based on job requirements to prevent contact with cement products.
- Keep the area as clear as possible to eliminate tripping hazards.
- Utilize spotters for effective communication and hazard control during work involving boom from a concrete pump truck or the chute of a concrete truck.
- Practice safe lifting techniques, avoid overexertion, and warm up muscles through stretching or light labor to prevent strains and muscle injuries.
