

CHARGING PLANE BATTERY

Remove battery from plane and attach to charging cable. (Use included cable only)

Once charged, disconnect battery from cable and reattach to plane. Tuck back into plane and secure door with screws. Remote will beep 1x every couple seconds when LiPo battery runs low.

LANDING GEAR INSTALLATION

Landing gear is recommended when landing on concrete or other smooth paved surfaces to avoid damage.

Firmly insert wheels into slots as shown, ensuring that the longer wheel is inserted in front, with wheel pointing forward. Black wheels should point outward.

FLY MORE!

Why wait for your battery to recharge? Increase your flight time with an extra battery on standby! (Sold separately).

SkyViper 500mAh LiPo battery recommended, or comparable 3.7V LiPo battery with JST connector plug

REMOTE BATTERIES

Insert batteries as shown. Replace door and secure with screws. Remote will beep 2x every couple seconds when batteries run low and need to be replaced.

INSPECTING AND REPLACING DAMAGED PROPS

For best performance, periodically inspect prop blades for damage or debris wrapped around motor shaft. If damaged, firmly hold motor housing and pull damaged blade from shaft. Make note of A or B marking on prop and replace with corresponding new prop.

IMPACT RESISTANT DESIGN

Vector is designed to take the abuse of learning to fly. However, if plane is damaged from severe impact or rough extended use, it can likely be sufficiently repaired with the included mending tape.

TROUBLESHOOTING

Plane is beeping after crash or landing and no longer responds to remote.	Turn plane off then on again to deactivate crash detection (auto-beep) and restore normal plane controls.
Remote beeps 5x quickly during flight, while plane is far away.	You are in danger of flying out of range. Turn back immediately to prevent losing remote connection.
Remote beeps 5x quickly during flight, and plane starts rapid descent.	Plane has flown out of range. Plane auto-lands for safety and starts auto-beeping to help you locate it.
- Plane cannot maintain altitude and drifts to ground. - Plane LED is flashing. - Remote starts to beep 1x every couple seconds.	Plane battery is running low. Recharge LiPo battery to full power.
Remote beeps 2x every couple seconds and/or doesn't connect to plane.	Remote batteries are running low. Replace with fresh batteries.
Plane bounces around or flips over when attempting runway take-off.	Take-off surface may be too bumpy or plane battery may no longer have enough power to complete a runway take-off. Try again with a freshly charged battery, or launch by hand instead.
- Plane does not respond to remote. - Plane starts to fly erratically or becomes difficult to control.	Turn off both remote and plane. Unplug then re-attach plane battery. Ensure remote batteries are new and plane battery is fully charged, then reattempt flight.

SIMD Programming Manual for Linux and Windows Paul Cockshott, Kenneth Renfrew, 2013-03-09 A number of widely used contemporary processors have instruction set extensions for improved performance in multi media applications The aim is to allow operations to proceed on multiple pixels each clock cycle Such instruction sets have been incorporated both in specialist DSPchips such as the Texas C62xx Texas Instruments 1998 and in general purpose CPU chips like the Intel IA32 Intel 2000 or the AMD K6 Advanced Micro Devices 1999 These instruction set extensions are typically based on the Single Instruction stream Multiple Data stream SIMD model in which a single instruction causes the same mathematical operation to be carried out on several operands or pairs of operands at the same time The level of parallelism supported ranges from two floating point operations at a time on the AMD K6 architecture to 16 byte operations at a time on the Intel P4 architecture Whereas processor architectures are moving towards greater levels of parallelism the most widely used programming languages such as C Java and Delphi are structured around a model of computation in which operations take place on a single value at a time This was appropriate when processors worked this way but has become an impediment to programmers seeking to make use of the performance offered by multi media instruction sets The introduction of SIMD instruction sets Peleg et al

[Mars Adapting](#) Francis Hoffman, 2021-03-15 As Clausewitz observed In war more than anywhere else things do not turn out as we expect The essence of war is a competitive reciprocal relationship with an adversary Commanders and institutional leaders must recognize shortfalls and resolve gaps rapidly in the middle of the fog of war The side that reacts best and absorbs faster increases its chances of winning Mars Adapting examines what makes some military organizations better at this contest than others It explores the institutional characteristics or attributes at play in learning quickly Adaptation requires a dynamic process of acquiring knowledge the utilization of that knowledge to alter a unit's skills and the sharing of that learning to other units to integrate and institutionalize better operational practice Mars Adapting explores the internal institutional factors that promote and enable military adaptation It employs four cases drawing upon one from each of the U.S. armed services Each case was an extensive campaign with several cycles of action counteraction In each case the military institution entered the war with an existing mental model of the war they expected to fight For example the U.S. Navy prepared for decades to defeat the Japanese Imperial Navy and had developed carrier based aviation Other capabilities particularly the Fleet submarine were applied as a major adaptation The author establishes a theory called Organizational Learning Capacity that captures the transition of experience and knowledge from individuals into larger and higher levels of each military service through four major steps The learning change cycle is influenced he argues by four institutional attributes leadership organizational culture learning mechanisms and dissemination mechanisms The dynamic interplay of these institutional enablers shaped their ability to perceive and change appropriately
