The Leafhoppers and Planthoppers L. R. Nault, J. G. Rodriguez, 1985-09-23 The most comprehensive single source available on leafhoppers and planthoppers written to be accessible also to investigators new to these insects Covers their taxonomy morphology behavior population dynamics interactions with microbes including transmission of plant pathogens and key aspects of their biological control such as host plant resistance and parasites The leafhopper and planthopper faunas associated with three important crops are presented in concert with the evolution of host plant and insect *The leafhoppers and planthoppers of Germany (Hemiptera, Auchenorrhyncha)* Herbert Nickel, 2003 *The Leafhoppers and Planthoppers* L. R. Nault, J. G. Rodriguez, 1985-09-23 The most comprehensive single source available on leafhoppers and planthoppers written to be accessible also to investigators new to these insects Covers their taxonomy morphology behavior population dynamics interactions with microbes including transmission of plant pathogens and key aspects of their biological control such as host plant resistance and parasites The leafhopper and planthopper faunas associated with three important crops are presented in concert with the evolution of host plant and insect Handbook for the Identification of Leafhoppers and Planthoppers of Rice Michael R. Wilson, Michael F. Claridge, 1991 Rice is the most important cereal grown in tropical countries and sapsucking leafhoppers and planthoppers Homoptera Auchenorrhyncha reduce yields either by direct feeding or by transmitting virus and virus like pathogens Effective rice pest management requires the accurate identification of any pest species and this handbook provides keys to identify over 70 leafhopper and planthopper species recorded in the major rice growing regions All the major pest species are included as well as others that are frequently found but not yet considered important A comprehensive account of all these species with descriptions diagnoses distributions and notes on biology is given as well a key to nymphal stages of common Asian species and details of the separation of different instars An introduction to the morphology and taxonomic grouping of the Auchenorrhyncha and four pages of colour plates are also included and the volume is completed by a comprehensive and wide ranging bibliography Proceedings of 2nd International Workshop on Leafhoppers and Planthoppers of Economic Importance M. R. Wilson, L. R. Nault, 1987 *Planthoppers* R. F. Denno, John R. Perfect, 2012-12-06 Planthoppers include some of the most devastating pests of major agricultural crops throughout the world One species the rice brown planthopper is among the most economically important pests in Asia In past decades government policies encouraged the control of rice planthoppers with synthetic pesticides a tactic which promoted insecticide resistance and often led to the pesticide induced resurgence of pest populations To deter planthopper outbreaks a more ecologically sound management strategy is being implemented one based on a thorough investigation of population dynamics natural enemies and the genetics of host plant and insecticide adaptation In the natural habitats of North America and Europe scientists have also used planthoppers as model organisms to test ecological and evolutionary theory The consequence of these diverse studies is an extremely scattered literature on planthoppers that has

never been synthesized from an ecological perspective This volume summarizes what is known about planthopper ecology and biological control It takes a theoretical approach yet is deeply concerned with the application of theory to the practical problems of pest management Leafhopper Vectors and Plant Disease Agents Karl Maramorosch,2012-12-02 Leafhopper Vectors and Plant Disease Agents is the second in a multivolume series on vectors vector borne disease agents and plant disease spread This text aims to collect findings in leafhopper vector research to suggest promising frontiers for further research and to call attention to possible practical applications of understanding of leafhopper pathogen plant interactions This book is organized into five parts Opening chapters on the taxonomy bionomics and worldwide importance of leafhopper and planthopper vectors are appropriately relegated to Parts I and II Part III focuses on vector virus interactions of leafhopper planthopper and aphid borne viruses and virus induced cytopathological changes in vectors This part also explains the interactions of mycoplasma-like organisms MLOs and viruses in dually infected leafhoppers planthoppers and plants as well as the transitory vector virus interactions The artificial and aseptic rearing of vectors microinjection technique vector tissue culture and spiroplasmas and its vectors are all covered in Part IV Part V contains chapters on specific leafhopper borne viruses and MLOs leafhopper and planthopper vector control leafhopper borne pathogens of corn stunting diseases Western X disease and leafhopper borne xylem restricted pathogens This text will be valuable for students teachers and researchers of vector pathogen plant relationships Its in depth coverage of leafhoppers and planthoppers as vectors makes this book ideally suited as a supplemental text in graduate entomology and plant pathology courses on insect transmission of plant disease agents Nematodes and the Biological Control of Insect Pests RA Bedding,RJ Akhurst,HK Kaya,1993-01-01 Environmental and public health problems arising from the use of chemical insecticides have led to an increasing demand for alternatives for insect pest control Together with this widespread public concern resulting in governmental bans on many of the most effective insecticides and development of insecticide resistance has severely reduced the range of useful insecticides available Alternative control measures such as the biological control of pest insects with parasitoids and predators and microbial biocides have been in field use for several decades Although these alternatives are being continually improved most insect pests are nonetheless still controlled with chemical insecticides This book presents the latest work on the biological control of insects using nematodes it covers a range of topics that will help provide a better understanding of the potential problems involved in developing these nematodes as biological control agents Nematodes infect hundreds of different species from most orders of insects and affect their insect hosts in a variety of ways

Plants fungi and viruses were among the first biological objects studied with an electron microscope One of the two first instruments built by Siemens was used by Helmut Ruska a brother of Ernst Ruska the pioneer in constructing electron microscopes H Ruska published numerous papers on different biological objects in 1939 In one of these the pictures by G A Kausche E Pfankuch and H Ruska of tobacco mosaic virus opened a new age in microscopy The main problem was then as it still is today to obtain an appropriate preparation of the specimen for observation in the electron microscope Beam damage and specimen thickness were the first obstacles to be met L Marton in Brussels not only built his own instrument but also made considerable progress in specimen preparation by introducing the impregnation of samples with heavy metals to obtain useful contrast His pictures of the bird nest orchid root impregnated with osmium were revolutionary when published in 1934 It is not the place here to recall the different techniques which were developed in the subsequent years to attain the modern knowledge on the fine structure of plant cells and of different plant pathogens The tremendous progress obtained with tobacco mosaic virus is reflected in the chapter by M Wurtz on the fine structure of viruses in this Volume New cytochemical and immunological techniques considerably surpass the morphological information obtained from the pathogens especially at the host parasite interface

Peck, National Research Council Canada, 2001 This is a synthesis of both previously published information and abundant new data derived from field studies on Galagos insects The dynamics and patterns of the evolution ecology and distribution of the entire insect fauna are presented in general The core of the book is an account of the 495 species of insects in the smaller orders with detailed information on their distribution and bionomics
