North American Operations, 2002 *Chilton's Auto Service Manual*, 2002 [Chevrolet Monte Carlo](#) Curt Choate, John Harold Haynes, 1986 *Handbook of Anatomical Models for Radiation Dosimetry* Xie George Xu, Keith F. Eckerman, 2009-09-01 Over the past few decades the radiological science community has developed and applied numerous models of the human body for radiation protection diagnostic imaging and nuclear medicine therapy The Handbook of Anatomical Models for Radiation Dosimetry provides a comprehensive review of the development and application of these computational mode **Computational Methods in Transport** Frank Graziani, 2006-02-17 There exist a wider range of applications where asignificant fraction of the momentum and energy present in a physical problem is carried by the transport of particles Depending on the specific application the particles involved may be photons neutrons neutrinos or charged particles Regardless of which phenomena is being described at the heart of each application is the fact that a Boltzmann like transport equation has to be solved The complexity and hence expense involved in solving the transport problem can be understood by realizing that the general solution to the 3D Boltzmann transport equation is in fact really seven dimensional 3 spatial coordinates 2 angles 1 time and 1 for speed or energy Low order approximations to the transport equation are frequently used due in part to physical justification but many in cases simply because a solution to the full transport problem is too computationally expensive An example is the diffusion equation which effectively drops the two angles in phase space by assuming that a linear representation in angle is adequate Another approximation is the grey approximation which drops the energy variable by averaging over it If the grey approximation is applied to the diffusion equation the expense of solving what amounts to the simplest possible description of transport is roughly equal to the cost of implicit computational fluid dynamics It is clear therefore that for those application areas needing some form of transport fast accurate and robust transport algorithms can lead to an increase in overall code performance and a decrease in time to solution

Service Life Estimation and Extension of Civil Engineering Structures Vistasp M. Karbhari, L S Lee, 2010-12-20 Service life estimation is an area of growing importance in civil engineering both for determining the remaining service life of civil engineering structures and for designing new structural systems with well defined periods of functionality Service life estimation and extension of civil engineering structures provides valuable information on the development and use of newer and more durable materials and methods of construction as well as the development and use of new techniques of estimating service life Part one discusses using fibre reinforced polymer FRP composites to extend the service life of civil engineering structures It considers the key issues in the use of FRP composites examines the possibility of extending the service life of

structurally deficient and deteriorating concrete structures and investigates the uncertainties of using FRP composites in the rehabilitation of civil engineering structures Part two discusses estimating the service life of civil engineering structures including modelling service life and maintenance strategies and probabilistic methods for service life estimation It goes on to investigate non destructive evaluation and testing NDE NDT as well as databases and knowledge based systems for service life estimation of rehabilitated civil structures and pipelines With its distinguished editors and international team of contributors Service life estimation and extension of civil engineering structures is an invaluable resource to academics civil engineers construction companies infrastructure providers and all those with an interest in improving the service life safety and reliability of civil engineering structures A single source of information on the service life of reinforced concrete and fibre reinforced polymer FRP rehabilitated structures Examines degradation mechanisms in composites for rehabilitation considering uncertainties in FRP reliability Provides an overview of probabilistic methods for rehabilitation and service life estimation of corroded structures

Brown Dwarf Companions to Young Solar an Stanimir Metchev, 2006-02 We present results from an adaptive optics survey conducted with the Palomar and Keck telescopes over 3 years which measured the frequency of stellar and sub stellar companions to Sun like stars The survey sample contains 266 stars in the 3 10000 million year age range at heliocentric

distances between 8 and 200 parsecs and with spectral types between F5 K5 A sub sample of 101 stars between 3 500 million years old were observed in deep exposures with a coronagraph to search for faint sub stellar companions A total of 288 candidate companions were discovered around the sample stars which were re imaged at subsequent epochs to determine physical association with the candidate host stars by checking for common proper motion Benefitting from a highly accurate astrometric calibration of the observations we were able to successfully apply the common proper motion test in the majority of the cases including stars with proper motions as small as 20 milli arcseconds year The results from the survey include the discovery of three new brown dwarf companions HD 49197B HD 203030B and ScoPMS 214B 43 new stellar binaries and a triple system The physical association of an additional a priori suspected candidate sub stellar companion to the star HII 1348 is astrometrically confirmed The newly discovered and confirmed young brown dwarf companions span a range of spectral types between M5 and T0 5 and will be of prime significance for constraining evolutionary models of young brown dwarfs and extra solar planets Based on the 3 new detections of sub stellar companions in the 101 star sub sample and following a careful estimate of the survey incompleteness a Bayesian statistical analysis shows that the frequency of 0 012 0 072 solar mass brown dwarfs in 30 1600 AU orbits around young solar analogs is 6 8% 4 9% 8 3% 2 sigma limits While this is a factor of 3 lower than the frequency of stellar companions to G dwarfs in the same orbital range it is significantly higher than the frequency of brown dwarfs in 0 3 AU orbits discovered through precision radial velocity surveys It is also fully consistent with the observed frequency of 0 3 AU extra solar planets Thus the result demonstrates that the radial velocity brown dwarf desert does not extend to wide separations contrary to previous belief
