

Q.41: What do you understand by the ionic character of a covalent bond?

Ans: **Ionic Character in a Covalent Bond:**

When a covalent bond is formed between two dissimilar atoms, e.g between H and Cl, the more electronegative atom (Cl) attracts the shared pair of electrons towards itself more than the less electronegative atom (H). Thus a partial negative charge comes on the chlorine atom and a partial positive charge comes on the hydrogen atom. These charges are also called poles. The polarity of a covalent bond depends on the difference in the electronegativities of the bonded atoms.

Q.42: Classify the following bonds as ionic or covalent. For those bonds that are covalent indicate whether they are polar or non-polar.

Ans: **Covalent Bonds:**

(a) H_2 (non-polar)

(b) HCl (polar)

(c) $\text{HC} \equiv \text{CH}$ (non-polar)

(d) $\text{O} = \text{O}$ (non-polar)

Ionic Bonds:

(e) NaCl

(f) CaCO_3
