Single/Dual Action Manual Pull Station

INTRODUCTION

The Model HMS-S and HMS-D Manual Stations, and their Spanish and Portuguese versions, from Siemens Industry, Inc., are field installed addressable devices containing advanced control panel communication technology. This technology, which provides two-direction communication with the control panel, produces an Intelligent Initiating Device. The HMS-S/-SE/-SP are single action; the HMS-D/-DE/-DP are double action.

MS Cover

PROGRAMMING INSTRUCTIONS

Refer to Figure 1 to locate the opening on the MS cover that allows access to the programming holes which are on the HMS printed circuit board.

To connect the HMS to the DPU Programmer/Tester, insert the plug from the DPU cable provided with the Programmer/Tester into the opening on the HMS as shown in Figure 2. Because HMS devices are polarity insensitive, the programming plug can be inserted into the programming holes in either direction.

To prevent potential damage to the DPU **DO NOT** connect an HMS to the DPU until at least one wire is removed from terminals 1 or 2 of the HMS.

Follow the instructions in the DPU Manual (P/N 315-033260) to program the HMS to the desired address. Record the device address on the label located on the HMS front panel. The HMS can now be installed and wired to the system.

Connecting the DPU Plug

OPERATION

The HMS-S and HMS-D manual stations, as well as their Spanish and Portuguese versions, operate with the FireFinder-XLS or FS-250 Control Panels via the DLC or FS-DLC Device Loop Card.

All HMS manual station housings have a pull down lever that locks in position after releasing a spring loaded switch. (See Figure 4.) To indicate the manual station is activated, the pull down lever remains down and locked until the station is physically reset.

The HMS-D/-DE/-DP have an additional lever labeled *PUSH IN/EMPUR/E/EMPURRE* which must be operated first.

All models are reset by opening the hinged housing cover with an Allen key and then closing and locking the cover.
