

PATHWAY FOR DIAGNOSING TYPE 1 DIABETES IN CHILDREN

DIABETES UK
KNOW DIABETES. FIGHT DIABETES.

Around 700 children every year become seriously ill with diabetic ketoacidosis (DKA) because the early signs of type 1 diabetes are missed. DKA is a life-threatening condition that requires intensive medical intervention. It's not only extremely traumatic for the child and family but it's also a preventable cost to the NHS.

THE PATHWAY

If a child presents with any symptom of diabetes:

- passing urine frequently, bedwetting in a previously 'dry' child, or heavier nappies
- excessive thirst
- excessive tiredness
- weight loss.

If you see any of these symptoms, perform capillary blood glucose testing immediately.

Less common symptoms include:

- constipation
- oral or vulval thrush.

In children under the age of two, symptoms may not be immediately obvious and the child may appear to be unwell with less specific symptoms.

If in doubt, perform capillary blood testing immediately.

Help us raise awareness of the 4 Ts of diabetes

Diabetes UK is raising awareness of the most common signs and symptoms to look out for:

- Toilet: passing urine more frequently.
- Tired: excessive tiredness.
- Thirsty: excessive thirst.
- Thin: weight loss.

Order free posters to use in your healthcare setting about the symptoms of diabetes from our online shop at: diabetes.org.uk/symptoms-diabetes-poster

For more information on the 4 Ts visit: diabetes.org.uk/The4Ts

Random blood glucose level equal to or greater than 11mmol/L.

Yes

No

Arrange for the child to see the specialist paediatric diabetes team the same day.

Consider other causes of symptoms.
