A Really Short History of Nearly Everything Bill Bryson, 2008-10-28 Bill Bryson's own fascination with science began with a battered old school book he had when he was about ten or eleven years old It had an illustration that captivated him a diagram showing Earth's interior as it would look if you cut into it with a large knife and removed about a quarter of its bulk The idea of lots of startled cars and people falling off the edge of that sudden cliff and 4 000 miles is a pretty long way to fall was what grabbed him in the beginning but gradually his attention turned to what the picture was trying to teach him namely that Earth's interior is made up of several different layers of materials and at the very centre is a glowing sphere of iron and nickel as hot as the Sun's surface according to the caption And he very clearly remembers thinking How do they know that Bill's storytelling skill makes the How and just as importantly the Who of scientific discovery entertaining and accessible for all ages He covers the wonder and mystery of time and space the frequently bizarre and often obsessive scientists and the methods they used and the mind boggling fact that somehow the universe exists and against all odds life came to be on this wondrous planet we call home

Nicole Cipri, 2012-02-24 ABOUT THE BOOK In his introduction to A Short History of Nearly Everything author Bill Bryson describes a childhood experience common to many of us a brief infatuation with science with all its potential and possibility For Bryson it was inspired by a textbook's cut away illustration of the interior strata of the Earth with the molten core at the center For myself it was a children's biography of Jacques Cousteau Excited by the nearly endless prospects of science the questions that could finally satisfy a child's curiosity we both reached for more books and found our budding passions firmly squashed by an impenetrable wall of unfathomable writing As Bryson writes in his introduction there seemed to be a mystifying universal conspiracy among textbook authors to make certain the material they dealt with never strayed too near the realm of the mildly interesting Bryson wrote A Short History of Nearly Everything as an antidote to the dry as dust science tomes that weigh down students' backpacks It is a layman's love song to science to its strange history and stranger characters Published in 2003 it has become a popular addition to the popular science genre MEET THE AUTHOR Nicole Cipri is a restless wanderer and passionate writer A graduate of the Evergreen State School in Olympia WA Nicole has since written about such varied topics as modern urban farming the role of glitterbombing as political theater and the economic impacts of natural disasters You can follow her adventures on Twitter [nicolecipri](#) EXCERPT FROM THE BOOK Drama abounded in the 19th century After the discovery of the first dinosaur fossil in 1784 and with subsequent uncovering of massive bones that belonged to other extinct species there was an uncomfortable public debate concerning extinctions Why after all would an omniscient God create species of animals only to casually wipe them out Throughout history the sciences have routinely butted heads with the Church a trend that continues today From geology and paleontology Bryson moves to chemistry With its origins in the enigmatic studies of alchemy chemistry evolved along its own strange path Bryson tells one exemplifying story in which an amateur alchemist became convinced he could distill gold from human urine The similarity of color Bryson explains seems to have been a factor in his conclusion In an attempt to prove his hypothesis the man collected fifty buckets of human urine which he kept in his cellar After a few months the man noted the substance in the

buckets began to glow or explode into flames when exposed to air He had failed in distilling gold from urine but he had succeeded in creating phosphorous Buy a copy to keep reading **Bill Bryson** Scott P.
