Note 1. The `split` environment is something of a special case. It is a subordinate environment that can be used as the contents of an `equation` environment or the contents of one “line” in a multiple-equation structure such as `align` or `gather`.

Note 2. The `equarray` and `equarray*` environments described in [Lamport] are not recommended because they produce inconsistent spacing of the equal signs and make no attempt to prevent overprinting of the equation body and equation number.
