Segmentation and Registration Methodologies Ayman S. El-Baz, Rajendra Acharya U, Majid Mirmehdi, Jasjit S.

Suri, 2011-05-04 With the advances in image guided surgery for cancer treatment the role of image segmentation and

registration has become very critical The central engine of any image guided surgery product is its ability to quantify the

organ or segment the organ whether it is a magnetic resonance imaging MRI and computed tomography CT X ray PET

SPECT Ultrasound and Molecular imaging modality Sophisticated segmentation algorithms can help the physicians delineate

better the anatomical structures present in the input images enhance the accuracy of medical diagnosis and facilitate the

best treatment planning system designs The focus of this book is towards the state of the art techniques in the area of image

Huang, Julia P. Owen, Pratik Mukherjee, 2017-03-07 The human brain is extraordinary complex and yet its origin is a simple

tubular structure Rapid and dramatic structural growth takes place during the fetal and perinatal period By the time of birth

a repertoire of major cortical subcortical and white matter structures resembling the adult pattern has emerged however

there are continued maturational changes of the gray matter and white matter throughout childhood and adolescence and

into adulthood The maturation of neuronal structures provides the neuroanatomical basis for the acquisition and refinement

of cognitive functions during postnatal development Histological imaging has been traditionally dominant in understanding

neuroanatomy of early brain development and still plays an unparalleled role in this field Modern magnetic resonance

imaging MRI techniques including diffusion MRI as noninvasive tools readily applied to in vivo brains have become an

important complementary approach in revealing the detailed brain anatomy including the structural connectivity between brain regions In this research topic we presented the most recent investigations on understanding the neuroanatomy and connectivity of human brain development using both histology and MRI Modern advances in mapping normal developmental brain anatomy and connectivity should elucidate many neurodevelopmental disorders ranging from rare congenital malformations to common disorders such as autism and attention deficit hyperactivity disorder ADHD which is a prerequisite for better diagnosis and treatment of these currently poorly understood diseases

Non-invasive Brain Stimulation in Neurology and Psychiatry Ignacio Obeso, Antonio Oliviero, Marjan Jahanshahi, 2017-04-11 The potential efficacy of non invasive brain stimulation procedures for the management of specific symptoms in diverse neurological and psychiatric conditions has been tested in the past decade or so For example repetitive transcranial magnetic stimulation rTMS over prefrontal areas has been extensively investigated as a treatment for patients with medication resistant depression and has been shown to be associated with improvement of mood Similarly non invasive stimulation techniques have been applied to various symptoms of Parkinson s disease such as bradykinesia and dyskinesias with variables degrees of success reported However attempts to expand previously observed clinical improvements to other neurological disorders e g Tourette s syndrome autism epilepsy has been controversial In trying to bypass potential confounding elements researchers aim to target neural populations altered in disease to either increase or decrease their corrupted baseline activity In addition a complementary approach is to extend stimulation protocols that results enhanced behavior in healthy participants This Frontiers Research Topic on non invasive brain stimulation and enhancement of function tries to combine a series of articles from researchers who used non invasive brain stimulation to aim improvement of either a motoric cognitive or behavioral nature investigated behaviorally physiologically or using brain imaging techniques in clinical populations Investigation of the relation between enhancement of function in healthy populations and clinical improvement in patients with neurological or psychiatric disorders needs further consideration *The Journal of Neuroscience* ,2009
