Investigations into the Potential Benefits of Artificial Intelligence and Deep Learning to Surgical Oncologists Marco Scarpa, Hani J. Marcus, Simon Williams, 2023-08-11. Computational power has risen exponentially in recent decades providing new opportunities in many fields including that of surgical oncology. One branch of information technology permeating many aspects of healthcare is artificial intelligence (AI) and the incorporation of deep learning neural networks into clinical care. AI enables the computational analysis of vast amounts of data and the learned ability to contextualize this information digitally through sophisticated algorithms, opening a number of opportunities in the clinical setting. This Research

Topic aims to bring together the latest research in the field to demonstrate how these tools can be of benefit to surgical oncologists and patients alike. Oncological surgeons are tasked with making difficult clinical decisions simultaneously weighing up patient data with expected outcomes whilst keeping in mind the risks of subsequent morbidity and mortality. Incorporating deep learning algorithms in this field would enable mass clinical biochemical and radiological data analysis with numerous potential benefits. Current algorithms have been shown to be efficacious and efficient in making prognostic predictions and making post surgical outcome assessments using data from various sources. This Research Topic invites manuscript submissions which demonstrate utilizations of AI as a tool to support surgical oncologists through their advanced data analysis capabilities. Manuscript submissions which showcase new opportunities for the incorporation of these systems into surgical practice are welcome as well as how AI can support clinical decision making and be used in the training of new oncological surgeons. Mediterranean Conference on Medical and Biological Engineering and Computing 2013 Laura M. Roa Romero, 2013-10-01 The general theme of MEDICON 2013 is Research and Development of Technology for Sustainable Healthcare. This decade is being characterized by the appearance and use of emergent technologies under development. This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards novel concepts and practices. The consequence will be a significant improvement in health care and well fare i.e. the shift from

a reactive medicine to a preventive medicine This shift implies that the citizen will play an important role in the healthcare delivery process what requires a comprehensive and personalized assistance In this context society will meet emerging media incorporated to all objects capable of providing a seamless adaptive anticipatory unobtrusive and pervasive assistance The challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society while new paradigms are created for this inclusive society to be socially and economically sustainable and respectful with the environment In this way these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications
