Learn Science, Learn Math, Learn to Teach Science and Math, Homo Sapiens HEDY MOSCOVICI, Penny J.

Gilmer, Katherine C. Wieseman, 2013-02-11 Dr Hedy Moscovici's life on three continents and her battle with ovarian cancer shaped the unique co learning and participative leadership perspective on science and mathematics education shared in this book. This text has multiple audiences: prospective and practicing teachers wanting to motivate their students to learn science and mathematics; educators mentoring teachers to become transformative intellectuals and critical pedagogues; parents interested in their children's advancement; and interested policymakers and the public wishing to deepen their understanding about learning in general and educational issues in science and mathematics. Two mottos: "I can't learn from you if you can't learn from me" and "to teach is to learn twice." Summarize the essence of her message. The spotlight is on the critical interdependence of factors: specifically human ability to construct understanding; necessity of disequilibrium to spark neural rewiring; cognition, emotion, pleasure vs pain; even science or math phobia; connections; sociocultural context; dilemma created by the absence of a clearly trustworthy learning meter for a society valuing objective measurement of quality of learning; human relationships sustained by three R's: rights, responsibilities, respect; and heightened awareness of power relationships leading to a spirit of collaboration; recognition of each individual's strengths and expertise; and critical pedagogy. **Kick It**

Lauren Renz, 2014-08-23 Seventeen-year-old Avery Framer and her best friends have always loved soccer; in fact, that is what brought them all together. While attending high school, Avery and her soccer mates revel in the thrill of competition, crazy adventures off the field, and in the inseparable bond they share. But when tragedy strikes on an icy November night, Avery's world is suddenly turned upside down. Now left to struggle through shock, uncertainty, and the darkness of feelings she has never experienced before, Avery attempts to find her footing while trying to make sense of her team's new attractive young coach's flirting, the end of her high school career, and friendships that seem to grow more complicated with each passing day. But despite her best efforts to move forward with her life, it is not long before she ends up pushing away the one thing she has always known. Left embroiled in a battle between honoring her past and stepping into a new future, Avery must learn to trust her heart and rely on her inner strength before she will ever be able to find her place in the world. In this poignant tale, a teenage girl is forced to deal with fate's unimaginable twists and turns. And she comes to realize that no matter what is thrown her way, it is how she deals with life's many bumps that matters in the end. *Abstracts of Papers Presented* Kansas

Academy of Science. Meeting, 1982 **Learning and Leading with Technology**, 2007 **Metacognition in Science**

Education Anat Zohar, Yehudit Judy Dori, 2011-10-20 Why is metacognition gaining recognition both in education generally and in science learning in particular? What does metacognition contribute to the theory and practice of science learning? Metacognition in Science Education discusses emerging topics at the intersection of metacognition with the teaching and learning of science concepts and with higher order thinking more generally. The book provides readers with a background on

metacognition and analyses the latest developments in the field It also gives an account of best practice methodology Expanding on the theoretical underpinnings of metacognition and written by world leaders in metacognitive research the chapters present cutting edge studies on how various forms of metacognitive instruction enhance understanding and thinking in science classrooms The editors strive for conceptual coherency in the various definitions of metacognition that appear in the book and show that the study of metacognition is not an end in itself Rather it is integral to other important constructs such as self regulation literacy the teaching of thinking strategies motivation meta strategies conceptual understanding reflection and critical thinking The book testifies to a growing recognition of the potential value of metacognition to science learning It will motivate science educators in different educational contexts to incorporate this topic into their ongoing research and practice
