Cosmology Without God? David Alcalde,2019-06-26 Is God a superfluous hypothesis for modern cosmology According to the normal understanding of modern science the answer should be affirmative because modern science is supposed to be free of metaphysical and theological presuppositions However despite its self proclaimed neutrality regarding metaphysics and theology modern science is full of metaphysical and theological presuppositions These can be summarized as a mechanistic understanding of nature a reduction of God to an external agent in competition with natural processes and creation to a worldly mechanism These presuppositions are deficient and untenable and they remain unconscious for the most part in the dialogue between science and theology making it intellectually impossible because of the reduced notions of God nature and creation assumed Using the coherent and unreduced image of God and nature provided by the Christian doctrine of creation ex nihilo Fr David Alcalde intends to uncover and criticize the incoherent theological assumptions inherent in a concrete branch of modern science which is modern cosmology The author points out the presence of these inadequate theological presuppositions in both the theologians who use modern cosmology to offer scientific proof for the existence of God and the atheistic cosmologists who use their science to reject the idea of God

The Kalām Cosmological Argument: A Reassessment Jacobus Erasmus,2018-01-08 This book offers a discussion of the kalām cosmological argument and presents a defence of a version of that argument after critically evaluating three of the most important versions of the argument It argues that since the versions of the kalām cosmological argument defended by Philoponus c 490 c 570 al Ghazālī 1058 1111 and the contemporary philosopher William Lane Craig all deny the possibility of the existence of an actual infinite these arguments are incompatible with Platonism and the view that God foreknows an endless future This conclusion however is not a problem for the proponents of the kalām cosmological argument for the book shows how the argument can be defended without denying the possibility of the actual infinite In order to offer a comprehensive analysis of Philoponus and al Ghazālī's cosmological arguments the book draws on recent English translations of some of their works Next the book advances a detailed argument against the popular argument based on the impossibility of an actual infinite Finally the book offers a unique defence of the kalām cosmological argument by defending philosophical arguments for a beginning of time that do not deny the actual infinite evaluating which hypothesis best explains the discoveries of modern cosmology and offering an argument in support of the premise that if the universe came into existence then God brought it into existence

The Multiverse and Participatory Metaphysics Jamie Boulding,2021-09-30 This book offers a new theological approach to the multiverse hypothesis With a distinctive methodology it shows that participatory metaphysics from ancient and medieval sources represents a fertile theological ground on which to grapple with contemporary ideas of the multiverse There are three key thinkers and themes discussed in the book Plato and cosmic multiplicity Aquinas and cosmic diversity and Nicholas of Cusa and cosmic infinity Their insights are brought into interaction with a diverse range of contemporary theological philosophical and scientific figures to demonstrate that a participatory account of the relationship between God and creation leads to a greater continuity between theology and the multiverse proposal in modern cosmology This is in contrast to existing work on the subject which often assumes that the two are in conflict By offering a fresh way to engage theologically with multiverse theory this book will be a unique resource for any scholar of Religion and Science Theology Metaphysics and Cosmology

The Teleological and Kalām Cosmological Arguments Revisited Andrew Loke,2022-05-03 A prominent issue in many contemporary philosophy of religion debates concerns whether the universe has a Designer This book moves the discussion ahead in a significant way

by devising an original deductive formulation of the Teleological Argument TA which demonstrates that the following are the only possible categories of hypotheses concerning fine tuning and order i chance ii regularity iii combinations of regularity and chance iv uncaused and v design This book also demonstrates that there are essential features of each category such that while the alternatives to design are unlikely the Design Hypothesis is not and that one can argue for design by exclusion without having to first assign a prior probability for design By combining the TA with the Kalam Cosmological Argument KCA which it defends against various objections this book responds to the God of the gaps objection by demonstrating that the conclusion of the KCA TA is not based on gaps which can be filled by further scientific progress but follows from deduction and exclusion This is an open access book
