Nervous System Study Guide

Introduction:

The nervous system is the master coordinating system of the body. Every thought, action, and sensation reflects its activity. Because of its complexity, the structures of the nervous system are described in terms of two principal divisions—the central nervous system (CNS) and the peripheral nervous system (PNS). The CNS, consisting of the brain and spinal cord, interprets incoming sensory information and issues instructions based on past experience. The PNS, consisting of cranial and spinal nerves and ganglia, provides the communication lines between the CNS and the body's muscles, glands, and sensory receptors. The nervous system is also divided functionally in terms of motor activities into the somatic and autonomic divisions. It is important, however, to recognize that these classifications are made for the sake of convenience and that the nervous system acts in an integrated manner both structurally and functionally.

Questions:

1. List the three major functions of the nervous system.

- a. Sensations (sensory input)
- b. Interpretation (integration of info)
- c. Response (commands responses)

2. Choose the key responses that best correspond to the descriptions provided in the following statements. Insert the appropriate letter or term in the answer blanks.

KEY CHOICES: A. Autonomic nervous system B. Central nervous system
 C. Peripheral nervous system D. Somatic nervous system

- B 1. Nervous system subdivision that is composed of the brain and spinal cord.
- D 2. Subdivision of the PNS that controls voluntary activities such as the activation of skeletal muscles.
- C 3. Nervous system subdivision that is composed of the cranial and spinal nerves and ganglia.
- A 4. Subdivision of the PNS that regulates the activity of the heart and smooth muscle and of glands; it is also called the involuntary nervous system.
- B 5. A major subdivision of the nervous system that interprets incoming information and issues orders.
- C 6. A major subdivision of the nervous system that serves as communication lines, linking all parts of the body to the CNS.

TEXT BOOK OF MEDICINAL CHEMISTRY-I Dr. Prabhat Kumar Upadhyay, Dr. Narsukumari Korrapati, Dr. Pichika Mallikarjuna Rao, Dr. Balijepalli Madhu Katyayani, Dr. Mak Kit-Kay, Dr. Vishal Trivedi, 2025-05-31. The Text Book of Medicinal Chemistry I is a foundational academic resource tailored for undergraduate pharmacy and life science students. It begins with an insightful introduction to the history and development of medicinal chemistry, followed by an exploration of essential physicochemical properties such as ionization, solubility, partition coefficient, and bioisosterism that influence drug action. The book delves into drug metabolism, explaining both Phase I and Phase II reactions and emphasizing the stereochemical aspects affecting biotransformation. A significant portion is dedicated to the autonomic nervous system, detailing adrenergic and cholinergic neurotransmitters, their biosynthesis, metabolism, receptors, and drug interactions. Comprehensive coverage is given to sympathomimetic agents and adrenergic antagonists, including their classification, mechanism of action, and SAR. The cholinergic section spans both parasympathomimetic agents and cholinergic blockers, thoroughly explaining their pharmacological and structural aspects. Sedatives and hypnotics, such as benzodiazepines and barbiturates, are analyzed for their therapeutic role and SAR. Antipsychotic drugs, including phenothiazine derivatives and newer analogs, are presented with clarity. The anticonvulsant chapter includes barbiturates, hydantoins, and newer agents like gabapentin and valproic acid, along with mechanisms and SAR. The text also explains the classification and use of general anesthetics, including inhalation agents and dissociative anesthetics like ketamine. In-depth sections cover narcotic and non-narcotic analgesics, their SAR, mechanism, and therapeutic uses. It emphasizes both opioid agonists and antagonists, such as morphine and naloxone. The final chapter provides detailed information on anti-inflammatory drugs, including NSAIDs like aspirin, ibuprofen, and diclofenac. Throughout the book, structure-activity relationships, SAR, mechanisms of action, and pharmacological applications are well integrated with drug examples and classifications. This book provides a practical, application-oriented approach to medicinal chemistry, designed to help students connect chemical structures with pharmacological effects. Each chapter encourages critical thinking about how

molecular features influence drug behavior The text is organized logically facilitating step by step learning of complex concepts Additionally it bridges the gap between basic science and clinical pharmacy making it ideal for academic and exam preparation
