The Objects of Thought Tim Crane,2013-10-10 The Objects of Thought addresses the ancient question of how it is possible to think about what does not exist Tim Crane argues that the representation of the non existent is a pervasive feature of our thought about the world and that we will not adequately understand thought s representational power intentionality unless we have understood the representation of the non existent Intentionality is conceived by Crane in terms of the direction of the mind upon an object of thought or an intentional object Intentional objects are what we think about Some intentional objects exist and some do not Non existence poses a problem because there seem to be truths about non existent intentional objects but truths are answerable to reality and reality contains only what exists The proposed solution is to accept that there are some genuine truths about non existent intentional objects but to hold that they must be reductively explained in terms of truths about what does exist The Objects of Thought offers both an original account of the nature of intentionality and a solution to the problem of thought about the non existent

The Charisma Machine Morgan G. Ames, 2019-11-19 A fascinating examination of technological utopianism and its complicated consequences In The Charisma Machine Morgan Ames chronicles the life and legacy of the One Laptop per Child project and explains why despite its failures the same utopian visions that inspired OLPC still motivate other projects trying to use technology to disrupt education and development Announced in 2005 by MIT Media Lab cofounder Nicholas Negroponte One Laptop per Child promised to transform the lives of children across the Global South with a small sturdy and cheap laptop computer powered by a hand crank In reality the project fell short in many ways starting with the hand crank which never materialized Yet the project remained charismatic to many who were captivated by its claims of access to educational opportunities previously out of reach Behind its promises OLPC like many technology projects that make similarly grand claims had a fundamentally flawed vision of who the computer was made for and what role technology should play in learning Drawing on fifty years of history and a seven month study of a model OLPC project in Paraguay Ames reveals that the laptops were not only frustrating to use

easy to break and hard to repair they were designed for technically precocious boys idealized younger versions of the developers themselves rather than the children who were actually using them The Charisma Machine offers a cautionary tale about the allure of technology hype and the problems that result when utopian dreams drive technology development
